

Computer Aided Optimum Design in Engineering IX

WIT*PRESS*

WIT Press publishes leading books in Science and Technology.

Visit our website for new and current list of titles.

www.witpress.com

WIT*eLibrary*

Home of the Transactions of the Wessex Institute.

Papers presented at Computer Aided Optimum Design in Engineering IX
are archived in the WIT eLibrary in volume 80 of WIT Transactions on

The Built Environment (ISSN 1743-3509).

The WIT eLibrary provides the international scientific community with immediate and
permanent access to individual papers presented at WIT conferences.

Visit the WIT eLibrary at www.witpress.com.

PREFACE

Engineers and designers at large have always aimed for the best performance for their prototypes. To obtain that, objective engineering intuition and long time honoured rules and experience were usually the main allies in the design process. Nevertheless, increasing complex engineering task, more competitive industrial environment and technological changes ask for more powerful design tools. In that regard design optimization methods constitute an ideal approach for improving the behaviour of the prototypes under study, leading them to the best. The benefits of using such techniques are not only that the product always has a much better design; in addition to that the engineers can nurture their design skills in a rational way and, thus, perfecting their professional capabilities.

The OPTI Conferences are a series of scientific meetings devoted to such a field. This book contains most of the papers presented in OPTI 2005 held during May of 2005 in the Greek island of Skiathos. The eighth previous editions took place in Southampton, UK (1989); Boston, USA (1991); Zaragoza, Spain (1993); Miami, USA (1995); Rome, Italy (1997); Orlando, USA (1999); Bologna, Italy (2001) and Detroit, USA (2003).

Contents of the papers in the book range from innovations in numerical methods, enhancing the current capabilities of existing algorithms to practical applications on structural optimization, mechanical, car, civil engineering and mining engineering, manufacturing and some other industrial examples. Also, implementations in new emergent fields as biomechanics or problems solved in fluid-structure interactions are present in the text. Overall, the list of research works show the maturity of optimization techniques and the vast number of disciplines they can be applied to.

Consequently, this volume constitutes a valuable addition to the existing literature on design optimization. The Editors would like to express their gratitude to all authors for their contributions. Also, they are indebted to the members of the International Scientific Advisory Committee of OPTI 2005 who reviewed the papers efficiently and promptly, thus ensuring the technical quality of papers and the success of the Conference.

The Editors
May 2005

CONTENTS

Section 1: Advances in numerical methods

Search direction improvement for gradient-based optimization problems <i>S. Ganguly & W. L. Neu</i>	3
Application of the sensitivity analysis of an error estimator to the generation of an adaptive remeshing strategy <i>G. Bugeda</i>	13
A new paradigm for multidisciplinary automatic optimal design of a high speed milling cutter <i>N. K. Jha</i>	25
A Tabu Search procedure for sensor structure optimisation <i>M. Carnero, J. Hernández & M. Sánchez</i>	35
Development of numerical methods and computer code for the mathematical modelling of work piece heat transfer during processing <i>A. Tudball & S. G. R. Brown</i>	45
A nodal based evolutionary structural optimisation algorithm <i>Y.-M. Chen, A. J. Keane & C. Hsiao</i>	55
The need for numerical techniques for the optimization of structures using Morphological Indicators <i>B. Verbeeck, J. Van Steirteghem, W. P. De Wilde & Ph. Samyn</i>	65

Section 2: Structural optimisation

Structural synthesis using the MINLP optimization approach <i>S. Kravanja</i>	75
--	----

The optimal shape of curvilinear fibers in FRC <i>P. Procházka & N. Starikov</i>	85
Topology and shape optimization using the local rule <i>E. Kita, H. Saito, T. Tamaki, H. Shimizu & Y. M. Xie</i>	95
Optimization of high tension towers by sequential linear programming with quadratic line search <i>F. Navarrina, A. Valera, J. Paris, I. Colominas & M. Casteleiro</i>	105
Multi-level integrated structural sizing of a composite sandwich wing <i>F. Romano, G. Gatta & M. Pecora</i>	117
Topology optimization using an adaptive genetic algorithm and a new geometric representation <i>B. Sid, M. Domaszewski & F. Peyraut</i>	127
Shape optimization: an analytical approach <i>C. Mattheck, M. Scherrer, K. Bethge & I. Tesari</i>	137
Minimum weight shape design for the natural vibration problem of plate and shell structures <i>M. Shimoda, J. Tsuji & H. Azegami</i>	147
Standard dimension optimization of steel frames <i>U. Klanšek & S. Kravanja</i>	157
Compression modelling of pin-jointed trusses <i>S. D. Waller & K. A. Seffen</i>	165
Simulated annealing optimization of walls, portal and box reinforced concrete road structures <i>F. González-Vidoso, V. Yepes, J. Alcalá, M. Carrera & C. Perea</i>	175
Structural design optimization using regression techniques <i>G. Steenackers, P. Guillaume & S. Vanlanduit</i>	187
Optimization of linearly distributed pre-stress in laminated cylinders <i>P. Procházka</i>	197
Maximum reliability design of elastic structures subject to random dynamic loads <i>F. Trentadue & G. C. Marano</i>	207

Synthesis of trusses using the MINLP optimization approach <i>S. Šilih & S. Kravanja</i>	221
---	-----

Optimum design of structures with limited ductility <i>F. Giambanco, L. Palizzolo & A. Caffarelli</i>	235
--	-----

Section 3: Optimisation in biomechanics

Improving human muscle modeling using numerical optimization <i>M. El-Sayed, J. Brelvi-Fornari & P. Shah</i>	247
---	-----

Topology optimisation of hip prosthesis to reduce stress shielding <i>S. Shuib, M. I. Z. Ridwan, A. Y. Hassan & M. N. M. Ibrahim</i>	257
---	-----

Section 4: Optimisation in fluid structure interaction

Aeroelastic analysis and sensitivity of the flutter speed of long span suspension bridges with distributed computing <i>S. Hernández, J. A. Jurado & F. Nieto</i>	269
---	-----

AeroElastic Design Code (AEDC) for high aspect ratio wing sizing <i>G. Gatta, F. Romano & M. Pecora</i>	279
--	-----

Exponential stability of controllers for fluid-structure interactions using reduced order system models with residual mode filters <i>M. J. Balas, C. W. Hindman & M. Lesoinne</i>	289
--	-----

Section 5: Optimisation in car and mechanical engineering

An integrated model for crankshaft optimal design <i>A. M. Shariff & N. K. Jha</i>	301
---	-----

Using a genetic algorithm in shape optimization of the front axle bump stop for a new pickup vehicle (ZAMAYD-24F) <i>M. Shafiqh, B. Dehghan-Manshadi & B. Khosravi</i>	311
--	-----

Parameter optimization of analytic fuzzy controllers for robot manipulators <i>J. Kasac, B. Novakovic, D. Majetic & D. Brezak</i>	323
---	-----

Numerical optimization of a distributor valve <i>L. Dahlén & P. Carlsson</i>	333
---	-----

Optimal multiple orientation synthesis of a planar parallel manipulator performed for different prescribed output workspaces <i>A. M. Hay & J. A. Snyman</i>	345
Methodical redesign of a semitrailer <i>F. Cappello, T. Ingrassia, A. Mancuso & V. Nigrelli</i>	359
Section 6: Industrial examples of design optimisation	
A generalized optimization tool for manufacturing processes <i>J. A. J. El-Sayed</i>	373
A model for balancing sustainability versus security <i>R. Oberle, T. Pohlman & K. Roper</i>	383
Optimal design of fatigue loaded piping branch connections <i>H. Martikka, I. Pöllänen & E. Taitokari</i>	391
Integrated engineering design of economic mine backfill systems <i>E. De Souza & A. P. Dirige</i>	401
The optimization of an industrial pneumatic supply system <i>R. W. Derksen & E. Hancox</i>	413
Comparison between implicit and explicit FE models for simulation of hot rod rolling <i>F. Lambiase, F. Capece Minutolo, M. Durante & A. Langella</i>	423
An FE computer model to investigate the effects of varying A.C. frequency and strip speed during high speed resistance seam welding of tinsplate <i>B. S. Suthar & S. G. R. Brown</i>	431
Optimal design of a disk drive system <i>E. Baltaci & N. K. Jha</i>	441
The CAD/CAE system of a tricone rock bit <i>Z. Wu, V. Thomson, H. Attia & Y. Lin</i>	453
Author Index	461
