WIT_{eLibrary}

Home of the Transactions of the Wessex Institute.

Papers presented at Computational Ballistics III are archived
in the WIT eLibrary in volume 45 of WIT Transactions on

Modelling and Simulation (ISSN 1743-355X). The WIT eLibrary provides the
international scientific community with immediate and permanent access to individual
papers presented at WIT conferences.

Preface

The study of computational ballistics is one of the most challenging scientific endeavours, not only because of the diversity of time and space scales involved in practically all problems, but due to its interdisciplinary character.

Interest in ballistics has also grown considerably recently as a result of the complexity of the political and military situation in many parts of the world. The classical subdivision into internal, external and terminal ballistics now encompasses numerous applications on how to model and protect against accidental or man made explosions. Many other civilian applications of ballistics are also of growing importance as impact, crash and blast problems are a by-product of more sophisticated techniques involving dimensions and speeds impossible to achieve a few years ago.

The computational solution of problems in ballistics require specialised tools. Problems with very short time scales are particularly difficult to solve accurately as well as those involving changing of state or material and geometry conditions. Computational ballistics solutions frequently require substantial computer power and the use of specialised algorithms.

The lack of sufficient number of open meetings in the field also preclude the sharing of important information amongst researchers and hence a way to avoid choosing the wrong alternatives. Because of that, conferences such as this are particularly important.

This conference started in Rio in 2003 and was reconvened in Cordoba, Spain in 2005 before the meeting that took place in the New Forest.

This volume covers the following topics:

- Fluid flow aerodynamics
- Interior ballistics
- Terminal ballistics
- Experimental mechanics/ballistics and field testing
- New developments in computational techniques
- Systems and technology

The Editors are grateful to the members of the International Scientific Advisory Committee and other colleagues who helped to review the papers included in this book. They are also indebted to all authors for their presentations.

The Editors
New Forest, 2007

Contents

Section 1: Fluid flow aerodynamics

Unsteady computational fluid dynamics modeling of free-flight projectile aerodynamics <i>J. Sahu</i>	3
3D transient numerical simulation for sabot separation <i>D. Touati & S. Peles</i>	13
Fast calculation of direct fire trajectories taking the earth's rotation into account <i>W. Roetzel, W. Czarnetzki & T. Maier</i>	21
Generating an aerodynamic model for projectile flight simulation using unsteady time accurate computational fluid dynamic results <i>J. Kokes, M. Costello & J. Sahu</i>	31

Section 2: Interior ballistics

Suppression of axial combustion instability in solid rocket motors <i>D. R. Greatrix</i>	57
ICE-ALE modelling for the combustion of homogeneous solid propellant <i>A. Peratta & C. Peratta</i>	67
Stochastic study of 60-mm gun-projectile responses <i>M. Chen</i>	77

Section 3: Terminal ballistics

On the linkage of impact damage to modeling of ballistic performance <i>J. M. Wells</i>	89
A method to increase the tip velocity of a shaped charge jet using a hollow cavity <i>D. R. Scheffler & W. P. Walters</i>	99
A computational viscoelasticity/damage/plasticity model for high-explosive materials <i>P. Rangaswamy & R. M. Hackett</i>	109

Section 4: Experimental mechanics/ballistics and field testing

Offshore platforms survivability to underwater explosions: part I <i>A. A. Motta, E. A. P. Silva, N. F. F. Ebecken & T. A. Netto</i>	123
Ballistic tests and numerical simulations for containment capability characterisation of Waspaloy® alloy <i>M. Di Sciuva, M. Degiovanni, M. Mattone, M. Gherlone, N. Bonora, A. Ruggiero & C. Frola</i>	131
Experimental survey of the pressure cone and temperature field of an A/T missile system <i>K. Krallis, N. G. Orfanoudakis, M. Founti, D. T. Hountalas, A. Fatsis & N. Vlachakis</i>	141

Section 5: New developments in computational techniques

Safety checks and hit probability computation in numerical trajectory calculation using error propagation technology <i>A. Kuhrt & H. Rothe</i>	153
Scalable parallel computation of explosively formed penetrators (EFPs) <i>E. L. Baker, C. Chin, B. E. Fuchs & J. Pham</i>	163
Data mining in military systems <i>A. A. Motta, A. S. Alves & N. F. F. Ebecken</i>	171

Computer simulated fragmentation arena test for assessing lethality and safety separation distances of explosive fragmentation ammunitions
V. M. Gold, E. L. Baker & J. M. Pincay 181

Section 6: Systems and technology

Evaluations of computational techniques for the engraving of projectiles
J. South, B. Powers & M. Minnicino..... 193

Long range electromagnetic cannon
E. Schmidt & J. Tzeng..... 203

Analysis of weapon systems protecting military camps against mortar fire
M. Graswald, I. Shaydurov & H. Rothe..... 213

Empirical relationship for muzzle exit pressure in a 155 mm gun tube
D. Carlucci & J. Vega..... 225

Author Index 231
