## Preface

Research and developments of computational methods for solving heat transfer problems continue to be important, because heat transfer topics are commonly of a complex nature and several different mechanisms, like heat conduction, convection, turbulence, thermal radiation and phase change may occur simultaneously. Although heat transfer might be regarded as an established and mature scientific discipline, its role and relevance in sustainable development and reduction of greenhouse gases as well as for micro- and nanoscale structures and bio-engineering have been recently identified. Non-linear phenomena may, besides the momentum transfer, appear due to temperature-dependent thermophysical properties. In engineering design and development works, reliable and accurate computational methods are requested to replace or complement expensive and time consuming experimental trial and error work. Tremendous advancements have been achieved during recent years due to improved numerical solution approaches of non-linear partial differential equations and computer developments, to achieve efficient and rapid calculations by parallelised computations on, e.g., PC-clusters. Nevertheless, to further progress computational methods in heat transfer, developments in theoretical and predictive procedures, both basic and innovative, and applied research are needed.

This book contains the edited versions of the papers presented at the Eighth International Conference on Advanced Computational Methods in Heat Transfer held in Carcavelos, Lisbon, Portugal in 2004. The objective of this conference series is to provide a forum for presentation and discussion of advanced topics, new approaches and application of advanced computational methods to heat transfer problems. All papers have been reproduced directly from material submitted by the authors but an attempt has been made to use a unified outline and methods of presentation for each paper. The contributed papers are grouped in appropriate sections to provide better access for readers.

The editors would like to thank all the distinguished and well-known scientists who supported our efforts by serving in the International Scientific Advisory Committee, reviewing the submitted abstracts and papers. The excellent administrative work of the conference secretariat at WIT is greatly appreciated and the efficient co-operation and encouragement by the staff at WIT Press contributed significantly in producing the conference proceedings.

The Editors  
Lisbon, 2004

# Contents

## Section 1: Conduction, including non-linear problems

Lattice-free finite difference method for backward heat conduction problems <i>K. Iijima &amp; K. Onishi</i> .....	3
Modeling uncertainty in three-dimensional heat transfer problems <i>X. Wan, D. Xiu &amp; G. E. Karniadakis</i> .....	15
Three dimensional and thermal transient analysis of sedimentary rocks <i>V. P. S. King, L. Landau, J. L. D. Alves &amp; M. A. D. Martins</i> .....	25
Analytical two-dimensional solutions for heat transfer in a system with rectangular fin <i>A. Buikis, M. Buike &amp; S. Guseinov</i> .....	35

## Section 2: Natural and forced convection

Large eddy simulation of natural convective heat transfer along a vertical isothermal surface <i>E. E. A. Nilsson, Z. H. Yan &amp; B. Sundén</i> .....	47
Transient development of laminar mixed convection flow in a vertical tube <i>C. T. Nguyen, S. E. B. Maïga, T. Maré &amp; N. Galanis</i> .....	57

## Section 3: Heat and mass transfer

Thermal flow in glaciers: Application to the Lys Glacier (Italian Western Alps) <i>A. Deponti, L. De Biase &amp; V. Pennati</i> .....	69
--	----

A 3D FV method for Alpine Glaciers <i>A. Deponti, V. Pennati &amp; L. De Biase</i> .....	77
---	----

Numerical simulation of vortex structures in a two-dimensional vertical bluff-body burner for two different hydrocarbon fuels <i>H. Kawahara &amp; T. Nishimura</i> .....	87
--	----

#### **Section 4: Casting, welding, forging and other processes**

Numerical evaluation of heat dissipation by non-Darcian forced convection in porous/fluid systems <i>V. A. F. Costa, M. S. A. Oliveira &amp; A. C. M. Sousa</i> .....	99
--	----

Reactive two-phase flow model for materials in the semi-solid state <i>F. Pineau</i> .....	109
---	-----

Modelling of tools heating in hot forging processes <i>K. Mocellin &amp; L. Terzolo</i> .....	119
--	-----

Cellular automaton approach on micro solidification process of two phases alloy in vessels and horizontal castings <i>T. Tsuta &amp; T. Iwamoto</i> .....	129
--	-----

Improved method for better temperature assessment in the contact of die bearing surface with profile surface in aluminium hot extrusion <i>R. Turk, M. Terčelj, P. Fajfar &amp; G. Kugler</i> .....	145
--	-----

On 3D dynamic control of secondary cooling in continuous slab casting process <i>E. Laitinen, J. Pieskä &amp; V. Toivonen</i> .....	161
--	-----

Non destructive evaluation of heat-damage in aluminium alloy by laser-ultrasonic <i>A. Maslouhi &amp; R. Leblanc</i> .....	171
---	-----

#### **Section 5: Heat exchangers**

Design and operation of heat exchanger networks <i>W. Roetzel</i> .....	183
--	-----

Choices of heat exchanger network for incineration plant fuelled with high water content municipal solid waste <i>D. Chen, H. Liu &amp; T. Zhu</i> .....	193
---	-----

The automatic optimal control process for the operation changeover of heat exchangers <i>K. Li, X. Luo, B. Niemeyer &amp; M. Li</i> .....	203
Application of even temperature-difference field optimizing principle on fluid organization of multi-stream heat exchanger <i>C. Guomin, L. Hongbo &amp; L. Meiling</i> .....	215
Study on model predictive control of plate-fin heat exchangers <i>X. Guan, G.-M. Cui, M.-L. Li &amp; X. Luo</i> .....	223
Numerical calculation of the transient behaviour of two pure cross-flow heat exchangers coupled by a circulating flow stream <i>Ch. Na Ranong, J. Hapke &amp; W. Roetzel</i> .....	233
Dependence of heat transfer intensity on foam flow direction <i>J. Gyllys, S. Sinkunas &amp; T. Zdankus</i> .....	243
Compact tubular ceramic heat exchangers for micro gas turbine engines <i>A. V. Soudarev, A. A. Souryaninov &amp; B. V. Soudarev</i> .....	253

#### **Section 6: Atmospheric studies**

The influence of surface-atmosphere exchange processes on ozone levels <i>A. D'Allura, R. De Maria, M. Clemente, F. Lollobrigida, S. Finardi, C. Silibello &amp; G. Brusasca</i> .....	265
Numerical modelling of radiative and energetic balances in the urban canopy layer <i>S. Borghi, P. Dagna, L. De Biase &amp; D. Zappalà</i> .....	277
Heat transfer modelling with nuclear reactor containments: an experimental simulation <i>L. E. Herranz &amp; C. L. del Prá</i> .....	289
Thermal analysis of a turbine stack <i>E. Aulisa, A. Barletta, M. Gallipoli, A. Terenzi &amp; E. Zanchini</i> .....	301

#### **Section 7: Advances in computational methods**

Time dependent 3D heat radiation calculation in high temperature furnaces <i>C. Weichmann, R. Backofen &amp; A. Voigt</i> .....	313
--	-----

Non-linear model of time-dependent relaxation cores for the systems with cross transfer effects <i>A. M. Brener, A. S. Muratov &amp; L. Tashimov</i> .....	323
Optimization and design of cooling systems using a hybrid neural network and genetic algorithm methodology <i>S. K. Hannani, M. Fardadi &amp; R. Bahoush</i> .....	333
On heat load calculations in gas turbine combustors <i>M. Bahador, T. K. Nilsson &amp; B. Sundén</i> .....	345
Numerical identification of a source location in steady state heat conduction <i>K. Iijima, Y. Ohura &amp; K. Onishi</i> .....	359
Numerical modeling of microwave heating of dielectric materials <i>E. F. Kent &amp; S. Kent</i> .....	371
Data acquisition system for optimization and control of the processes from an isotopic exchange column <i>C. M. Retevoi, I. Stefan, A. Bornea &amp; O. Balteanu</i> .....	381
Integral transforms for heat and fluid flow in two- and three-dimensional porous media <i>R. M. Cotta, H. Luz Neto, L. S. de B. Alves &amp; J. N. N. Quaresma</i> .....	387
<b>Section 8: Modelling and experiments</b>	
Evaluation of CFD codes by comparison of numerical predictions of an air-conditioned room case study <i>P. D. Gaspar &amp; R. A. Pitarma</i> .....	401
Numerical processing of thin-film sensor temperature data <i>L. Battisti, E. Bertolazzi &amp; F. Trivellato</i> .....	411
Development and optimization of a marble heating plate using numerical simulation <i>B. Pavković, V. Medica &amp; Z. Čarija</i> .....	423
Modelling of radiative heat transfer applying computer graphics software <i>K. Domke</i> .....	433
Dynamic modelling of refrigerated truck chambers <i>R. A. Pitarma, P. D. Gaspar &amp; M. G. Carvalho</i> .....	443

## **Section 9: Micro and nano scale heat transfer**

- Hydrodynamic and thermal behaviours of a nanofluid in a uniformly heated tube  
*S. E. B. Maïga, C. T. Nguyen, N. Galanis & G. Roy*..... 453
- Computational investigation of low-speed gas flow and heat transfer in micro-channel using DSMC with pressure boundary condition  
*H. Qunwu, W. Qiuwang, W. Xian & H. Ozoe* ..... 463

## **Section 10: Case studies**

- Investigation of thermal distribution in the process chamber with the effects of shape and wall insulation  
*Y. H. Zheng & R. S. Amano* ..... 473
- Heat transfer modelling of slot jet impinging on an inclined plate  
*A. Ramezanpour, H. Shirvani & I. Mirzaee* ..... 485
- Analysis of a portal steel frame subject to fire by use of a truss model  
*P. G. Papadopoulos & A. Mathiopoulou* ..... 495
- Effect of blowing rate on the film cooling coverage on a multi-holed plate: application on combustor walls  
*P. Miron, C. Berat & V. Sabelnikov* ..... 507
- Author Index** ..... 517
