The Sustainable World

Aims and Objectives

Sustainability is a key concept of 21st century planning in that it broadly determines the ability of the current generation to use resources and live a lifestyle without compromising the ability of future generations to do the same. Sustainability affects our environment, economics, security, resources, health, economics, transport and information decisions strategy. It also encompasses decision making, from the highest administrative office, to the basic community level. It is planned that this Book Series will cover many of these aspects across a range of topical fields for the greater appreciation and understanding of all those involved in researching or implementing sustainability projects in their field of work.

Topics

Data Analysis	Simulation Systems
Data Mining Methodologies	Forecasting
Risk Management	Infrastructure and Maintenance
Brownfield Development	Mobility and Accessibility
Landscaping and Visual Impact Studies	Strategy and Development Studies
Public Health Issues	Environment Pollution and Control
Environmental and Urban Monitoring	Land Use
Waste Management	Transport, Traffic and Integration
Energy Use and Conservation	City, Urban and Industrial Planning
Institutional, Legal and Economic Issues	The Community and Urban Living
Education	Public Safety and Security
Visual Impact	Global Trends

Contents

Preface: Towards a safer future	xvii
Chapter 1	
Hazardous waste generation and management in Europe	1
<i>D. Kaliampakos, A. Mavropoulos & M. Menegaki</i>	
1.1 Introduction	1
1.2 Hazardous waste generation in Europe	2
1.2.1 Hazardous waste generation per employee	4
1.2.2 Main waste streams in Europe	5
1.3 Current hazardous waste management in Europe	7
1.4 Trends and expectations	9
1.4.1 Dangerous substances from waste streams and EU priorities	9
1.4.2 Future trends up to 2010	14
1.4.3 Emission trends of heavy metals	14
1.4.4 Emission trends of pesticides and POPs	15
1.5 The effect of Directive 99/31	16
1.6 Waste streams and pollutants of interest	17
1.6.1 Waste streams of interest	17
1.6.2 Pollutants of interest	18
1.6.3 Selection of the pollutants of interest	18
1.6.4 Chemical substances	19
1.6.4.1 Chemicals of concern	22
1.6.5 Heavy metals	22
1.6.5.1 Heavy metals in water pathways	22
1.6.5.2 Heavy metals in soil	23
1.6.5.3 Heavy metals in food	23
1.6.6 Persistent organic pollutants	23
1.6.6.1 Polycyclic aromatic hydrocarbons	23
1.6.6.2 Organochlorines dispersal in soil, groundwater and some global-scale problems	24
1.7 Conclusions	27

Chapter 2

Need and potential for underground disposal – survey of underground mines in Europe)	33
<i>D. Kaliampakos, A. Mavropoulos & M. Menegaki</i>	
2.1 Surface vs. underground hazardous waste disposal facilities	33
2.2 Survey of underground mines in Europe.....	34
2.3 The profile of mining activity in 15 EU countries	38
2.3.1 Austria.....	38
2.3.2 Belgium.....	39
2.3.3 Denmark.....	39
2.3.4 Finland	40
2.3.5 France.....	40
2.3.6 Germany.....	41
2.3.7 Greece	41
2.3.8 Ireland	42
2.3.9 Italy	43
2.3.10 Luxembourg.....	44
2.3.11 Portugal.....	44
2.3.12 Spain	45
2.3.13 Sweden.....	46
2.3.14 The Netherlands.....	48
2.3.15 The United Kingdom	48
2.4 Inactive underground mines used as waste disposal sites.....	50
2.4.1 Morsleben salt mine.....	50
2.4.2 Herfa-Neurode salt mine.....	52
2.4.3 Konrad iron mine	55
2.4.4 Stripa iron mine	57
2.4.5 Asse salt mine	58

Chapter 3

Criteria for selecting repository mines.....	61
<i>R. Pusch</i>	
3.1 Introduction	61
3.2 Rock structure.....	62
3.2.1 Crystalline rock.....	62
3.2.2 Argillaceous rock.....	62
3.2.3 Salt rock	65
3.2.4 Other rock types.....	67
3.3 Requirements for the use of mines as repositories.....	67
3.3.1 Function of the host rock	67
3.3.2 Conversion of mines to repositories	67
3.3.3 Size.....	68
3.3.4 Remaining exploitable ore.....	68

3.3.5	Rock structure, hydrology, and stability.....	68
3.3.5.1	General.....	68
3.3.5.2	Rock structure modelling.....	69
3.3.6	Transport to and in the mine.....	70
3.3.7	Facilities and installations.....	71
3.3.8	Stabilization.....	71
3.3.9	Cost.....	71
3.4	Reference mines.....	72
3.4.1	General.....	72
3.4.2	Crystalline rock.....	72
3.4.2.1	The Stripa Mine.....	72
3.4.2.2	Regional rock structure.....	72
3.4.2.3	Local rock structure.....	73
3.4.2.4	Rooms.....	74
3.4.2.5	Rock stress conditions.....	75
3.4.2.6	Rock stability issues.....	76
3.4.2.7	Hydrology in the far-field and near-field.....	77
3.4.3	Salt and argillaceous rock.....	77

Chapter 4

Engineered barriers.....	79	
<i>R. Pusch</i>		
4.1	Types and characteristics of engineered barriers.....	80
4.1.1	Clay.....	80
4.1.1.1	Fundamental behaviour of clay/water systems.....	80
4.1.1.2	Clay materials for waste isolation.....	82
4.2	Methods for constructing engineered barriers in underground mines.....	88
4.2.1	Materials.....	88
4.2.2	Preparation and application of smectite clay barriers.....	88
4.2.2.1	Compaction of blocks.....	89
4.2.2.2	Layerwise application and compaction.....	90
4.3	Maturation of smectite clay barriers.....	92
4.3.1	Background.....	92
4.3.2	Clay microstructure.....	92
4.3.3	Hydration.....	93
4.3.3.1	Mechanisms.....	93
4.3.3.2	Rate of hydration.....	94
4.4	The source term.....	99
4.4.1	Definitions.....	99
4.4.2	Tests.....	99
4.4.2.1	Alkaline batteries in Friedland Ton.....	99
4.4.2.2	Chemical interaction of clay and corroded batteries.....	101

4.4.2.3	Chemical interaction of clay and uncorroded Hg batteries	102
4.4.2.4	Other hazardous waste	102
4.5	Basis for modelling transport of hazardous elements from the waste	103
4.5.1	General.....	103
4.5.1.1	Definition of the source term	103
4.5.2	Safety aspects.....	105
4.6	Long-term chemical stability of smectite	106
4.6.1	General.....	106
4.6.2	Conversion of smectite to non-expandable minerals ('illitization')	106
4.6.3	Chemical interaction of smectite clay and cement	107
4.7	Cost estimates	111
4.7.1	Disposal of batteries (mixed with clay powder and compacted to blocks)	111
4.7.2	Disposal of solidified pesticides (sandwiched clay and clay/waste layers)	112

Chapter 5

	Stability analysis of mines	115
	<i>R. Adey & A. Calaon</i>	
5.1	Background and objective of the work	116
5.1.1	Concept model for prediction	116
5.1.2	Mine disposal concept	116
5.2	Modelling methodology	117
5.2.1	Mohr–Coulomb criterion	118
5.2.2	EDZ divided in subzones.....	119
5.2.3	Submodelling	119
5.2.4	Some experiments to determine the required model details.....	120
5.3	Description of cases to be studied and modelling assumptions	125
5.3.1	Limestone – room and pillar	125
5.3.2	Crystalline rock.....	129
5.3.2.1	Global (outer) model	130
5.3.2.2	Submodel	133
5.4	Material properties.....	134
5.5	Results of stability analysis	135
5.5.1	Case of mine in limestone.....	135
5.5.1.1	Case 1: Centre of the mine.....	135
5.5.1.2	Case 2: On the edge of the mine	137
5.5.2	Crystalline rock.....	141
5.5.2.1	Case 3: Global model.....	141
5.5.2.2	Submodel	143
5.6	Conclusions	151

Chapter 6

Risk assessment of underground repositories using numerical

modelling of flow and transport in fractured rock 157

V. Popov & A. Peratta

6.1	Overview of the problem.....	158
6.1.1	Scope and objectives.....	158
6.1.2	Fractured porous media	159
6.1.3	Overview.....	159
6.1.3.1	The continuum approach.....	159
6.1.3.2	The very near field zone.....	159
6.1.3.3	The near field flow	159
6.1.3.4	The far field model.....	160
6.1.3.5	The very far field model.....	160
6.1.3.6	The discrete fracture model.....	160
6.1.4	Historical development of porous media modelling	161
6.2	Governing equations.....	162
6.2.1	Flow	162
6.2.1.1	General formulation	162
6.2.1.2	Flow in the porous matrix	163
6.2.1.3	Flow in a single fracture.....	163
6.2.1.4	Fracture intersections	164
6.2.1.5	Flow in pipe connectors	165
6.2.2	Transport.....	165
6.2.2.1	General formulation	166
6.2.2.2	Transport in the porous matrix.....	167
6.2.2.3	Transport in a single fracture	167
6.2.2.4	Transport in pipes.....	167
6.2.2.5	Transport in pipe connectors.....	168
6.3	Numerical method	168
6.3.1	Introduction.....	168
6.3.2	The boundary element method	168
6.3.2.1	Integral formulation	168
6.3.2.2	Boundary discretization	170
6.3.2.3	Internal solution	172
6.3.3	The dual reciprocity method.....	172
6.3.3.1	General approach	173
6.3.3.2	Radial basis functions	174
6.3.3.3	The reaction term	175
6.3.3.4	The convective term.....	175
6.3.3.5	Time integration scheme.....	176
6.3.3.6	Domain decomposition and DRM–MD.....	176
6.4	Computational implementation	178
6.5	Results	180
6.5.1	Types of geological media considered	181

6.5.2	The waste types considered	181
6.5.2.1	Dichlorvos	181
6.5.2.2	Zinc	182
6.5.3	Case of mine and tunnel in crystalline rock	182
6.5.3.1	Geometry definition	182
6.5.3.2	Model discretization.....	184
6.5.3.3	Parameter estimation.....	185
6.5.3.4	Boundary and initial conditions	185
6.5.3.5	Results for flow	187
6.5.4	Case of disposal of dichlorvos in mine repository in crystalline rock.....	189
6.5.4.1	Modelling conditions for dichlorvos.....	189
6.5.4.2	Transport results for dichlorvos	190
6.5.5	Case of disposal of zinc in mine repository in crystalline rock.....	196
6.5.5.1	Modelling conditions for zinc.....	196
6.5.5.2	Transport results for zinc	197
6.5.6	Case of mine in limestone.....	197
6.5.6.1	Geometry definition	198
6.5.6.2	Parameter estimation.....	198
6.5.6.3	Boundary and initial conditions	198
6.5.6.4	Results for flow	198
6.5.7	Case of disposal of dichlorvos in mine repository in limestone	199
6.5.7.1	Modelling conditions for dichlorvos.....	199
6.5.7.2	Transport results for dichlorvos	200
6.5.8	Case of disposal of zinc in mine repository in limestone	206
6.5.8.1	Modelling conditions for zinc	206
6.5.8.2	Transport results for zinc	206
6.6	Risk assessment summary	207

Appendix to Chapter 2

A2.1	Austria	213
A2.1.1	Active mines and mineral production.....	213
A2.1.2	Inactive mines.....	214
A2.2	Belgium	214
A2.2.1	Active mines and mineral production.....	214
A2.2.2	Inactive mines.....	215
A2.3	Denmark	216
A2.3.1	Active mines and mineral production.....	216
A2.3.2	Inactive mines.....	217
A2.4	Finland.....	217
A2.4.1	Active mines and mineral production.....	217
A2.4.2	Inactive mines.....	223

A2.5	France	223
	A2.5.1 Active mines and mineral production.....	223
	A2.5.2 Inactive mines	225
A2.6	Germany	226
	A2.6.1 Active mines and mineral production.....	226
	A2.6.2 Inactive mines	227
A2.7	Greece.....	230
	A2.7.1 Active mines and mineral production.....	230
	A2.7.2 Inactive mines	233
A2.8	Ireland.....	235
	A2.8.1 Active mines and mineral production.....	235
	A2.8.2 Inactive mines	236
A2.9	Italy.....	236
	A2.9.1 Active mines and mineral production.....	236
	A2.9.2 Inactive mines	239
A2.10	Luxembourg	240
	A2.10.1 Mines and mineral production	240
A2.11	Portugal.....	240
	A2.11.1 Active mines and mineral production.....	240
	A2.11.2 Inactive mines	244
A2.12	Spain	244
	A2.12.1 Active mines and mineral production.....	244
	A2.12.2 Inactive mines	248
A2.13	Sweden	250
	A2.13.1 Active mines and mineral production.....	250
	A2.13.2 Inactive mines	253
A2.14	The Netherlands.....	256
	A2.14.1 Active mines and mineral production.....	256
	A2.14.2 Inactive mines	256
A2.15	The United Kingdom.....	256
	A2.15.1 Active mines and mineral production.....	256
	A2.15.2 Inactive mines	258
