## Preface

This book contains most of the papers presented at the 5<sup>th</sup> International Conference on Marine Technology held in Szczecin, Poland in May 2003. Previous conferences were held in the same location since 1995.

The contents of this volume reflect many of the changes which have taken place in the last few years in the area of ship design, building and operation. This Marine Technology Conference presents a series of developments in the following areas:

- Design and fabrication in ship building
- Ship building and design
- Hydrodynamics
- Navigation, ship operation and multi-mode transport
- Inland water transportation
- Reliability and safety in marine technology

The organisers are grateful to all authors for their excellent contributions and to the members of the International Scientific Advisory Committee who have helped to review abstracts and papers.

The Organisers  
2003

# Contents

## Section 1: Design and fabrication in shipbuilding

|                                                                                                                                                                                                          |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Numerical simulation of welding in shipbuilding<br><i>T.T. Chau &amp; F. Besnier</i> .....                                                                                                               | 3  |
| Quantification of shrinkage deformation on line-heating<br><i>T. Iwata &amp; K. Matsuoka</i> .....                                                                                                       | 21 |
| The study of longitudinal shrinkage in butt weld joint and weld bead<br><i>M. Iranmanesh &amp; S. Babakoochi</i> .....                                                                                   | 31 |
| Review of joining methods of sandwich panels in ship construction<br><i>R. Iwańkiewicz, R. Rutkowski &amp; T. Graczyk</i> .....                                                                          | 39 |
| Long fiber pp-glass composites for the design and manufacturing<br>of a recyclable sail boat<br><i>F. Fellingine, P. Conte, R. Rametta, A. Migali, O. Manni,<br/>L. Barone &amp; A. Maffezzoli</i> ..... | 49 |
| Fatigue tests of steel sandwich panel<br><i>J. Kozak</i> .....                                                                                                                                           | 59 |

## Section 2: Shipbuilding and design

|                                                                                                                                                         |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| The method for calculation of ship hull bending deformations<br>in sailing conditions<br><i>S. Belak</i> .....                                          | 71 |
| Decision matrix for the panel production line technological improvement<br>policy definition<br><i>N. Fafandjel, D. Pavletić &amp; M. Hadjina</i> ..... | 81 |

|                                                                                                                                                                        |    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| An approach to transformation of non-dimensional diagrams into nomograms and its application to new propeller design system<br><i>H. Tanaka &amp; Y. Yoshida</i> ..... | 91 |

### **Section 3: Hydrodynamics**

|                                                                                                                                      |     |
|--------------------------------------------------------------------------------------------------------------------------------------|-----|
| Hydrodynamic method of reduction of wave forces for ice-resistant floating platform<br><i>S.L. Karlinsky &amp; V.O. Mrykin</i> ..... | 105 |
|--------------------------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                                                                                                                      |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Some consequences for marine simulators of statistical coherence within the phase spectrum of sea waves<br><i>M.R. Belmont, R.W.F. Thurley, J.M.K. Horwood &amp; K. Bogsjö</i> ..... | 115 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                                         |     |
|---------------------------------------------------------------------------------------------------------|-----|
| Lift analysis of a planning boat model by wedge impact theory<br><i>Y. Yoshida &amp; V. Popov</i> ..... | 125 |
|---------------------------------------------------------------------------------------------------------|-----|

|                                                                                                                                                                                        |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Experimental study on motion of air bubbles in seawater (terminal velocity and drag coefficient of air bubble rising in seawater)<br><i>N. Kugou, K. Ishida &amp; A. Yoshida</i> ..... | 135 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                                                                                                                       |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Application of GAP and ROD non-linear finite elements to determination of wave induced loads acting on open sea fish farms<br><i>R. Klotzke, L. Konieczny &amp; J. Szymczak</i> ..... | 149 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

### **Section 4: Navigation, ship operation and multimode transport**

|                                                                                        |     |
|----------------------------------------------------------------------------------------|-----|
| A potential of reducing the risk of ship casualties by 50%<br><i>T. Jacobsen</i> ..... | 161 |
|----------------------------------------------------------------------------------------|-----|

|                                                         |     |
|---------------------------------------------------------|-----|
| Time length of a ship trip<br><i>H. Zeraatgar</i> ..... | 173 |
|---------------------------------------------------------|-----|

|                                                                                                                                                                       |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Fuzzy linear programming for various interpretations of fuzzy inequalities applied to optimisation of vessel traffic<br><i>W. Uchacz &amp; Z. Pietrzykowski</i> ..... | 181 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                                                           |     |
|---------------------------------------------------------------------------------------------------------------------------|-----|
| Challenges for multimode transport in international logistics park: a case of Taiwanese ports<br><i>Y.-C. Juang</i> ..... | 191 |
|---------------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                  |     |
