

# Flood Early Warning Systems

Knowledge and tools for their critical assessment

---

## About the Authors

---

### **Daniela Molinari**

Presently post-doc researcher at the Politecnico of Milan, Department of Civil and Environmental Engineering, her field of expertise is flood risk assessment and management with particular stress on flood damage estimation and its implication for mitigation strategies. She has been involved in several EU funded research in the field of natural hazards, for example the FP 6 Scenario (Support on Common European Strategy for sustainable natural and induced technological hazards mitigation, CN 036979) and the FP 7 Ensure (Enhancing resilience of communities and territories facing natural and na-tech hazards Contr. N. 212045) projects, and cooperates with several Italian authorities responsible for flood risk mitigation (e.g. the Po River Basin District) and management (e.g. local Civil Protection). She also teaches as assistant professor at the course “Emergency Plans for Hydrogeological Risk” at the international program offered by the Politecnico “Civil Engineering for Risk Mitigation”.

### **Scira Menoni**

Presently associate professor at the Politecnico of Milan, Department of Architecture and Urban Studies, teaching various courses on Risk and Crisis Management, Emergency Planning at the international program offered by the Politecnico, Civil Engineering for Risk Mitigation. She also teaches at the CERG-C Specialisation certificate for the assessment and management of geological and climate related risk at the Geneva University, Switzerland. Field of specialization is technological and natural risks prevention, looking particularly at non-structural measures. Among the latter, a specific stress is given to land use planning and urban development control. She has been involved and has coordinated EU funded research in the field of natural hazards; see for example, the FP 6 Scenario (Support on Common European Strategy for sustainable natural and induced technological hazards mitigation, CN 036979) and the FP 7 Ensure (Enhancing resilience of communities and territories facing natural and na-tech hazards Contr. N. 212045) projects.

### **Francesco Ballio**

Presently professor at the Politecnico of Milan, Department of Civil and Environmental Engineering, he has been head of the M.Sc. Civil Engineering for Risk Mitigation where he teaches hydraulic risk. His research activities cover a wide range of topics in river hydraulics, with special focus on mountain basins: sediment mechanics, morphological effects of floods, scour processes and vulnerability of river structures, environmental monitoring systems, flood risk management. He is associate editor of the Journal of Hydraulic Engineering (ASCE).

<b>Introduction: The idea and the structure of the book</b>	<b>1</b>
I.1 Flood mitigation tools and FEWSs	2
I.2 The objective and the structure of the book	5
Bibliography	5
<b>1 Basics of early warning</b>	<b>7</b>
1.1 The decision-making process during a flood warning	10
1.1.1 Warning and response: Can the decision-making be futile?	11
1.2 The decision-making problem: a possible framework	13
1.2.1 The role of uncertainty	14
1.2.2 The role of responsibility	17
1.2.3 The role of risk	18
1.3 The “Total Warning System”	21
1.3.1 The monitoring and forecasting sub-system	23
1.3.2 The risk information sub-system	24
1.3.3 The preparedness sub-system	26
1.3.4 The communication sub-system	27
1.4 A flood warning review	29
1.4.1 The political and legislative perspective	30
1.4.2 FEWSs implementation in North America and Europe	30
1.4.3 FEWSs LoD	32
1.5 Research needs and potential	36
1.5.1 The current state of EWSs for seismic, tsunami, landslides and volcanic risk	36
1.5.1.1 Seismic risk	36
1.5.1.2 Tsunami risk	37
1.5.1.3 Landslides risk	38
1.5.1.4 Volcanic risk	39
1.5.2 The challenges of flood early warning	40
1.5.3 Lessons learnt	41
1.5.3.1 Seismic risk	41
1.5.3.2 Tsunami risk	42
1.5.3.3 Landslide risk	42
1.5.3.4 Volcanic risk	43

1.6	Conclusions.....	43
	Bibliography.....	45
	Suggested lectures.....	48
1.A	An analysis of four Italian FEWSs.....	49
1.A.1	The FEWS for the Piemonte region.....	49
1.A.2	The FEWS for the town of Crotona.....	54
1.A.3	The FEWS for the Arno river basin.....	57
1.A.4	The FEWS for the Adige river basin.....	61
	Bibliography.....	64
<b>2</b>	<b>The role of forecasts</b>	<b>65</b>
2.1	Theory: from forecasts accuracy to forecasts quality and value.....	65
2.1.1	Flood forecasts quality assessment: a proposed methodology.....	66
2.2	Implementing the methodology: the case of Sondrio.....	68
2.2.1	The flood early warning system.....	68
2.2.2	The back analysis.....	71
2.2.3	The accuracy assessment.....	74
2.2.4	The quality assessment.....	78
2.2.5	The value assessment.....	83
2.3	Results: critical analysis and generalisation.....	86
2.3.1	The need of including damages.....	87
2.3.2	The need of including time.....	88
2.4	Conclusions.....	89
	Bibliography.....	89
<b>3</b>	<b>Damage assessment</b>	<b>91</b>
3.1	Damages, impacts, losses and costs.....	91
3.2	The evaluation of flood losses: available tools.....	95
3.2.1	Dealing with damage variability: hazard and vulnerability factors.....	101
3.2.2	Other challenges in damage assessment.....	104
3.3	Damage assessment worldwide: a critical overview.....	106
3.3.1	Exporting methods: suitable features.....	112
3.4	Implementing tools: the case of Sondrio.....	113
3.4.1	The stakeholder perspective.....	113
3.4.2	Damage to buildings.....	115
3.4.2.1	The hazard estimation.....	119
3.4.2.2	The exposure estimation.....	121
3.4.2.3	The damage assessment.....	121
3.4.3	Damage to lifelines.....	123
3.4.3.1	The “weight” of neglected components.....	125
3.4.4	First-aid, emergency and warning costs.....	127
3.4.4.1	The local database RaSDa.....	128
3.4.4.2	The analysis of data.....	129
3.4.4.3	The damage estimation.....	131
3.5	Results: discussion and generalisation.....	132
3.6	The role of scientific uncertainty.....	136
3.7	Conclusions.....	139
	Bibliography.....	140

<b>4</b>	<b>Warning, emergency management and damage reduction</b>	<b>143</b>
4.1	The effects of warning on expected damages .....	143
4.2	Assessment methods: how actual damages can be evaluated? .....	145
4.2.1	The “event-tree” approach .....	149
4.3	Implementing tools: the case of Sondrio .....	154
4.3.1	The performance index .....	154
4.3.2	The actual damage estimation .....	156
4.3.2.1	The effect of bridge gates .....	156
4.3.2.2	The effect of individual actions .....	158
4.3.3	The forecast value assessment .....	159
4.4	Results: discussion and generalisation .....	161
4.5	The role of scientific uncertainty .....	162
4.6	Conclusions .....	165
	Bibliography .....	165
4.A	Actual damage estimation: a real implementation of the event-tree approach .....	166
4.A.1	The Gippsland flood .....	166
4.A.2	The Maitland and Newcastle flood .....	170
4.A.3	Final remarks .....	174
	Bibliography .....	175
	<b>Conclusion: Summary of contents and critical discussion</b>	<b>177</b>
C.1	Summary of contents .....	177
C.2	Critical discussion .....	180
	Bibliography .....	183
