NINTH INTERNATIONAL CONFERENCE ON STRUCTURAL STUDIES, REPAIRS 
AND MAINTENANCE OF HERITAGE ARCHITECTURE

STREMAH IX

CONFERENCE CHAIRMEN

C.A. Brebbia
Wessex Institute of Technology, UK

and

A. Torpiano
University of Malta, Malta

INTERNATIONAL SCIENTIFIC ADVISORY COMMITTEE

Wessex Institute of Technology, UK
Structural Studies,
Repairs, and Maintenance of
Heritage Architecture IX

Edited by

C.A. Brebbia
Wessex Institute of Technology, UK
and
A. Torpiano
University of Malta, Malta
Preface

The first in the series of conferences, focusing on the structural issues that arise when looking after heritage architecture, was held in 1989, in Florence, Italy, a city synonymous with art, culture and urban beauty. The Conference has now come to Malta, a state that is smaller than many of the cities that this Conference has visited, and yet that is packed, in the full meaning of the word, with a history of heritage architecture that spans nearly six millennia – as far as we currently know! This Volume contains the proceedings of the Conference held in Malta.

The islands of Malta have limited material resources, in fact, only one – limestone, and a rather soft one at that. However, out of this resource, our ancestor builders have fashioned the habitat for their lives, as these unfolded and changed over the centuries. The problems and efforts that are being made to repair, restore, conserve and protect such limestone architectural heritage are considerable.

The problems encountered in Malta includes those of prehistoric megalithic temple structures, which are part of the World Heritage, and which are unique for a number of reasons, including their structural and architectural form, their concentration in such a small island, the lack of significant references elsewhere, as well as the fact that they are reputed to be the oldest surviving free-standing stone expressions of architecture in the world. The rehabilitation of the other main protagonists in the more recent history of the Maltese Islands, namely war, and fortifications are also considerable. The bulk of the intense, and sometimes exotic, fortification systems dates back to the sojourn of the Knights of St. John, or the Knights of Malta, as we prefer to call them, spanning the 17th and 18th centuries, and then to the British period, during the 19th and 20th centuries.

I would like to take this opportunity to thank all the participants at this Conference and in particular, the Wessex Institute of Technology for choosing Malta as the venue for STREMAH 05. The support of the Institute of Masonry and Construction Research of the University of Malta, Heritage Malta, and the Ministry for Tourism and Culture are also gratefully acknowledged.

Alex Torpiano
Malta, 2005
## Contents

### Section 1: Heritage architecture and historical aspects

Urban planning and architecture of the historic city of Ghadames, Libya: lessons from the past for cities of the future
*A. Abufayed, A. Rghei & A. Aboufayed* .................................................. 3

Construction and decay of the copper age tombs in Oman
*S. Niederhagemann* .................................................................................. 15

Traditional adobe building practices in the historic city of Ghadames, Libya
*A. A. Abufayed* ......................................................................................... 25

Symbolic, architectonic and artistic decorations in structural elements in traditional architecture in Taiwan
*C.-C. Fu* .................................................................................................. 35

Investigations and project hypotheses for the recovery and enhancement of the value of a military site: the case of the Ancona Citadel
*A. Fausto Pugnaloni & F. Fiori* ................................................................. 43

Historical towers and fortified houses in central Greece
*A. Vagelakos & M. Karaveziroglou* ......................................................... 53

Tide mills: the route of one forgotten heritage
*M. Santos* .............................................................................................. 63

Know how to restore: construction techniques in Baroque Rome – practices, devices and “secrets”
*N. Marconi* .............................................................................................. 73
Counterpoints and fugues: Le Corbusier’s use of colour for the Factory Claude and Duval in St. Dié
B. Klinkhammer ........................................................................................................83

Valuing cultural heritage – lessons learned
S. Navrud................................................................................................................95

Section 2: Structural issues

A comprehensive structural study of the Basilica of Pilar in Zaragoza (Spain)
L. E. Romera, S. Hernández & J. M. Reinosa......................................................103

The evolution of architectural form and the formulation of mechanics
B. P. Leftheris ........................................................................................................115

Re-readings: the design principles of remodelling existing buildings
S. Stone..................................................................................................................125

Study on the stability of the Abbey of San Costanzo al Monte
(Cuneo, Italy)
G. Pistone & A. Violante ....................................................................................135

Secant stiffness for no-tension masonry walls having a non-linear constitutive law
I. Mura ................................................................................................................145

Load path method in the interpretation of masonry vault behaviour
F. Palmisano, A. Vitone & C. Vitone .................................................................155

A novel procedure for evaluating the rotational stiffness of traditional timber joints in Taiwan
W.-S. Chang, M.-F. Hsu & W.-C. Chen .............................................................169

Section 3: Seismic behaviour and vibrations

Numerical investigation of the behavior of the church of Agia Triada, Drakotrypa, Greece
G. C. Manos, V. J. Soulis & A. Diagonuma.......................................................181

Damage to masonry buildings due to the Aegion (GR) 1995 earthquake
F. V. Karantoni & M. N. Fardis..........................................................................191
Dynamic and seismic performance of a basilica-type church under earthquake loading: the Farneta abbey
M. Betti & A. Vignoli .......................................................... 203

Seismic vulnerability of monumental buildings in Switzerland
M. Devaux & P. Lestuzzi .................................................. 215

Seismic vulnerability study of historical buildings in Old Montreal: overview and perspectives
M.-J. Nollet, O. Chaallal & K. Lefebvre ........................................... 227

Evaluation of the dynamic characteristics of typical Inca heritage structures in Machupicchu

Preliminary evaluation of the seismic vulnerability of the Inca’s Coricancha temple complex in Cusco

Vibration characteristics of the Bayon temple main tower,
Angkor, Cambodia
T. Maeda, Y. Sugiura & T. Hirai .................................................. 255

Dynamic identification and model updating of the Howa brick chimney, Tokoname, Japan
T. Aoki, D. Sabia, D. Rivella & H. Mutou ............................................ 265

Section 4: Seismic vulnerability analysis of historic centres in Italy, special session organised by L. Binda

Methodologies for the vulnerability analysis of historic centres in Italy
L. Binda .................................................................................. 279

Seismic behaviour of the historical structural system of the island of Lefkada, Greece
E. Vintzileou & P. Touliatos .......................................................... 291

Study of the seismic vulnerability of complex masonry buildings
M. R. Valluzzi, G. Cardani, A. Saisi, L. Binda & C. Modena ......................... 301
Application of a multidisciplinary investigation to study the vulnerability of Castelluccio (Umbria)
L. Binda, G. Cardani & A. Saisi ................................................................. 311

Seismic vulnerability assessment and structural improvement proposals for the building typologies of the historic centers of Vittorio Veneto (Italy)
M. R. Valluzzi, A. Bernardini & C. Modena ................................................ 323

Experimental and numerical study of multi-leaf masonry walls
M. Ramalho, A. Taliercio, A. Anzani, L. Binda & E. Papa ............................... 333

Section 5: Material characterisation

Hygrothermal analysis of external walls within the reconstruction of the Rijksmuseum Amsterdam
P. Häupl, J. Grunewald & U. Ruisinger ....................................................... 345

In situ non-destructive testing: the steel and concrete resistance assessment of “ancient” r/c structures
R. Pucinotti & R. A. De Lorenzo .................................................................... 355

Characterisation of mechanical properties of historic mortars – testing of irregular samples
J. Válek & R. Veiga ......................................................................................... 365

Evaluation of properties of magnesian lime mortar
S. Pavía, B. Fitzgerald & R. Howard ............................................................... 375

Aging of reinforced mortars and concretes: coupled modeling
P. Procházka & M. Válek .................................................................................. 385

Experimental study for the consolidation of stone of old fortifications
M. Stefanidou & I. Papayianni ....................................................................... 395

Section 6: Protection and preservation

The challenges of protecting heritage architecture in developing countries from earthquake disasters
M. B. Karkee, C. Cuadra & L. Sunuwar ......................................................... 407

Rehabilitation of historical buildings “Evaluation of policies and project outcomes in the Middle East: the case of Egypt”
M. M. Gamal & G. M. Selim ......................................................................... 421
St. Dominic church waiting to be explored in the old town of Famagusta
A. Atun..................................................................................................................433

Preservation, people, and politics in the restoration of the National Theatre of Panama: a case study
A. Rajer ...............................................................................................................441

Reconstruction of the “Neues Museum” in Berlin – support structure planning pro preservation of historic buildings
M. Gutermann & K. Steffens ..............................................................................451

Design and application of hydraulic grouts of high injectability for the structural restoration of the column drums of the Parthenon Opisthodomos
A. Miltiadou-Fezans, E. Papakonstantinou, K. Zambas, A. Panou & K. Frantzikinaki .................................................................461

Thermal treatment of moisture damaged construction
J. Dreyer ............................................................................................................473

The preservation and upgrading of historic metal truss bridges and the load carrying capacity
J. B. Kim..............................................................................................................483

Cathodic protection of historic steel framed buildings
P. Lambert & C. P. Atkins..................................................................................491

Section 7: Maintenance

Maintenance comments on a Persian historical wooden building
M. Hejazi.............................................................................................................503

A programmed maintenance project for the archaeological area of Paestum
S. D’Agostino & M. Bellomo...............................................................................513

Recovery and maintenance of the building complex used for tobacco manufacture in Cava de’ Tirreni
S. De Medici, K. Fabbricatti, S. Oppido, M. R. Pinto & A. Bianchi .................525

Maintenance and control of the transportation archaeology: structural evaluation of an historical suspension footbridge
C. Gentile & N. Gallino......................................................................................535
The maintenance of historic iron and steel structures: coping with corrosion
G. G. Nieuwmeijer .............................................................................................. 545

Section 8: Surveying and monitoring

Damage evaluation of medieval towers using the acoustic emission technique
A. Carpinteri & G. Lacidogna ............................................................................. 557

Structural health monitoring of structures repaired with FRP
Y. Khalighi ........................................................................................................ 567

Section 9: Simulation modelling

Experimental and numerical study of the long-term behaviour of ancient masonry
A. Anzani, L. Binda & A. Taliercio .................................................................... 577

The use of computerized energy simulations in assessing thermal comfort and energy performance of historic buildings
A. Geva.............................................................................................................. 587

Section 10: Case studies

Investigation on structures and materials of the Castle of Avio (Trento, Italy)

Investigation of the restoration of the iron suspension bridge at the castle of Wissekerke
M. de Bouw & I. Wouters .................................................................................. 611

Rehabilitation of the Hotel Africa building
S. Elhouar & M. Mhiri........................................................................................ 621

The Naviglio Grande in Milan: a study to provide guidelines for conservation
M. Boriani, S. Bortolotto, M. Giambruno, L. Binda & C. Tedeschi.............. 631

Author Index ..................................................................................................... 643
