Digital Architecture
and Construction
FIRST INTERNATIONAL CONFERENCE ON
DIGITAL ARCHITECTURE AND CONSTRUCTION

Digital Architecture and Construction 2006

CONFERENCE CHAIRMEN

A. Ali
University of Seoul, Korea

C. A. Brebbia
Wessex Institute of Technology, UK

INTERNATIONAL SCIENTIFIC ADVISORY COMMITTEE

H. Achten
V. Bourdakis
M. Burry
N. Y. Cheng
E. Y. Do

R. Garcia Alvarado
S. Kim
M. Kruger
H. Min Pai
R. Oxman
G. Pellitteri

J. Ripper Kos
M. Shik Lee
Z. Turk
G. Vasquez de Velasco
R. Woodbury

Organised by
School of Architecture & Architectural Engineering,
University of Seoul, Korea and
Wessex Institute of Technology, UK

Sponsored by
WIT Transactions on the Built Environment
WIT Transactions on The Built Environment

Transactions Editor
Carlos Brebbia
Wessex Institute of Technology
Ashurst Lodge, Ashurst
Southampton SO40 7AA, UK
Email: carlos@wessex.ac.uk

Preface

In the early stages of its employment, architects approached computer technology as an assistance technique that would enhance architectural practice. The scope of this engagement was captured in the phrase ‘computer-aided architectural design.’ In the four decades since that time, the role of computer technology in architecture has gained a marked significance and led to a different approach to physical production/construction. The scope has now been extended for architects to contemplate ‘totally digital architecture design/construction.’

The main focus in the development of digital tools for enhancing the practice of architecture has been the facility with which the various tasks involved have been represented, enabled or enhanced using computer technology. The digital representation of architectural entities and the digital manipulation of those entities have provided alternate means to produce architecture (construction). Drawing, modeling, performance simulation, design collaboration, construction management and building fabrication are now routinely performed using computer-based technology. This success has revealed the untapped potential of the computational representation of architecture.

Developments in digital technology based on the study of natural processes such as neural processing, genetic evolution and emergence now suggest that the elusive nature of creative architectural thought can be articulated enough to be applied in a technologically-mediated environment. Digital tools may finally reveal what other architectural tools have hitherto concealed – the architectonics of architecture. Therein lays promise (Ganapathy Mahalingam). The future of digital tools rests on the extent to which architects can accept that exemplary architectural designs that can be created in a computer-mediated environment and that digital thinking is indeed architectural thinking.

The digital age has radically reconfigured the relationship between conception and production, creating a direct digital link between what can be conceived and what can be built through “file-to-factory” processes of computer numerically controlled (CNC) fabrication (Branko Kolarevic).

This newfound ability to generate construction information directly from design information is what defines the most profound aspect of contemporary architecture. The close relationship that once existed between architecture and construction (what was once the very nature of architectural practice) could potentially reemerge as an unintended but fortunate outcome of the new digital processes of production.
The digital generation of information to manufacture and construct buildings can render the present inefficient hierarchies of intermediation unnecessary.

The 1st International Conference on Digital Architecture & Construction considers these facts in the meeting. As architecture design and constructability becomes a direct function of computability, the question is, what new instruments of practice are needed to take advantage of the opportunities opened up by the digital modes of production?

The Editors,
Seoul, 2006
Contents

Which new semantic for new shapes?
B. Colajanni, G. Pellitteri & S. Concialdi .................................................................1

Fluid (in)form and the encoding of space
J. Maze, M. McGlothlin & K. Tanzer.................................................................11

SpaceCustomiser: InterActive
H. Bier, K. de Bodt & J. Galle ........................................................................21

A discussion of the term digital tectonics
I. K. Andersson & P. H. Kirkegaard .................................................................29

Form follows idea: ideation and CADCAM
L. Barrow ........................................................................................................41

Formal complexity in Digital Architecture
S. Hatzellis .......................................................................................................51

Methods for investigating architecture: from the physical to the digital
D. Porter & R. Hanna ........................................................................................59

Global design practice: IT-based collaboration in AEC-projects
T. Schroepfer ......................................................................................................69

Acquisition of designable space for planar steel frames
M. Yamanari & H. Tanaka ..............................................................................77

The study of design problem in design thinking
Y.-c. Chiang .....................................................................................................85

PerFORMance: integrating structural feedback into
design processes for complex form-active surfaces
T. Al-Haddad & T. R. Gentry ...........................................................................97
Practically digital
D. Briscoe ..............................................................................................................111

The Virtual School of Architecture and Design
M. C. G. O. Holland ........................................................................................121

Operative representation and the digital
G. Perin ..................................................................................................................131

Infoarchitecture
D. G. Papi ............................................................................................................143

Understanding qualitative drivers in distance collaboration
for architectural services
B. Gardiner, P. Tombesi, B. Dave & P. Scriver ......................................................155

Narrative and the space of digital architecture: implementing interdisciplinary
storytelling in the design of interactive digital space
J. Maze .................................................................................................................167

Using personal service assistant for direct manipulation in smart space
J. Y. Chen & T. Jeng ............................................................................................177

On the integration of digital design and analysis tools
J. Klitgaard, P. H. Kirkegaard & M. Mullins .........................................................187

Evaluation of the urban regulations by three-dimensional modelling:
the district of Providencia in Santiago, Chile
D. Wurman & H. Torrent ......................................................................................197

Photogrammetry and 3D city modelling
Y. Kobayashi .......................................................................................................209

Ready, aim, fire: legitimizing the gaming environment
M. McGlothlin ....................................................................................................219

Comparative navigation system for collaborative architectural design
S. Oh & W. Yeo ..................................................................................................229

Re-thinking digital design
R. Oxman ............................................................................................................239

Construction of an electronic place by students
and what they might be learning
