International Series on Advances in Fluid Mechanics

Objectives

The field of fluid mechanics is rich in exceptional researchers worldwide who have advanced the science and brought a greater technical understanding of the subject to their institutions, colleagues and students.

This book series has been established to bring such advances to the attention of the broad international community. Its aims are achieved by contributions to volumes from leading researchers by invitation only. This is backed by an illustrious Editorial Board who represent much of the active research in fluid mechanics worldwide.

Volumes in the series cover areas of current interest and active research and will include contributions by leaders in the field.

Topics for the series include: Bio-Fluid Mechanics, Biophysics and Chemical Physics, Computational Methods for Fluids, Experimental & Theoretical Fluid Mechanics, Fluids with Solids in Suspension, Fluid-Structure Interaction, Geophysics, Groundwater Flow, Heat and Mass Transfer, Hydrodynamics, Hydronautics, Magnetohydrodynamics, Marine Engineering, Material Sciences, Meteorology, Ocean Engineering, Physical Oceanography, Potential Flow of Fluids, River and Lakes Hydrodynamics, Slow Viscous Fluids, Stratified Fluids, High Performance Computing in Fluid Mechanics, Tidal Dynamics, Viscous Fluids, and Wave Propagation and Scattering.

Series Editor

M. Rahman

DalTech, Dalhousie University, Halifax,
Nova Scotia, Canada

Assistant Series Editor

M.G. Satish

DalTech, Dalhousie University, Halifax,
Nova Scotia, Canada

Honorary Editors

C.A. Brebbia

Wessex Institute of Technology
UK

L.G. Jaeger

DalTech, Dalhousie University
Canada

L. Debnath

University of Texas-Pan American
USA

Associate Editors

E. Baddour

National Research Council of Canada
Canada

R. Grimshaw

Loughborough University
UK

S.K. Bhattacharyya

Contents

Preface	iii
Chapter 1 Introduction to the liquid state and the transport properties of liquids	1
1.1 Classical microscopic states or microstates and ensembles	8
1.2 Ideal gases, real gases and ‘gas-like’ models	10
1.3 Crystalline solids and ‘solid-like’ models	16
1.4 Dense fluids and intermolecular forces	19
1.4.1 Lennard-Jones potential	22
1.4.2 Repulsive hard-sphere potential	23
1.4.3 Repulsive square-mound potential	24
1.4.4 Repulsive power-law potential	24
1.4.5 Square-well potential	25
1.4.6 Sutherland potential	26
1.4.7 Elementary applications of the potential functions	27
1.5 Introduction to non-equilibrium statistical mechanics	27
1.6 Molecular theory of corresponding states	31
1.7 Group contribution methods	34
1.8 Lennard-Jones and Devonshire theory of the liquid state	35
1.9 McLaughlin and Horrocks theories of the liquid state	37
References	39
Chapter 2 Physical approach to the evaluation of liquid thermal conductivity	41
2.1 Heat transfer	41
2.1.1 Conduction heat transfer	42
2.1.2 Convective heat transfer	43
2.1.3 Radiative heat transfer	44

2.2	Physical models based on the use of the potential functions.....	45
2.2.1	The theory of Horrocks and McLaughlin.....	46
2.3	Physical models based on the use of non-equilibrium statistical mechanics.....	48
2.3.1	The theory of Zwanzig, Kirkwood, Oppenheim and Alder.....	49
2.3.2	The theory of Rice and Kirkwood.....	50
2.3.3	The theory of Rice and Alnott.....	51
2.4	Other theoretical models.....	52
	References.....	52
Chapter 3	Estimation methods for thermal conductivity of liquids	55
3.1	The prediction method of Weber and derived methods.....	56
3.1.1	The equation of Weber.....	56
3.1.2	The equation of Palmer.....	57
3.1.3	The equation of Vargaftik.....	57
3.1.4	The equations of Robbins and Kingrea.....	58
3.2	Methods based on the sound speed.....	59
3.2.1	The equation of Bridgman.....	59
3.2.2	The equation of Hirschfelder, Curtiss and Bird.....	59
3.2.3	The equation of Kardos.....	60
3.2.4	The equation of Sakiadis and Coates.....	60
3.2.5	The equation of Narasimhan, Swamy and Narayana.....	61
3.2.6	The equation of Missenard.....	61
3.3	Methods based on the work of Pachaiyappan, Ibrahim and Kuloor.....	62
3.3.1	First equation of Pachaiyappan <i>et al.</i>	62
3.3.2	Second equation of Pachaiyappan <i>et al.</i>	63
3.3.3	First equation of Pachaiyappan.....	63
3.3.4	Second equation of Pachaiyappan.....	63
3.3.5	The equation of Pachaiyappan and Vaidyanathan.....	64
3.3.6	The equation of Vaidyanathan and Velayutham.....	64
3.4	Other prediction formulae.....	64
3.4.1	The equation of Osida.....	64
3.4.2	First equation of Badea.....	65
3.4.3	Second equation of Badea.....	65
3.4.4	First equation of Smith.....	66
3.4.5	Second equation of Smith.....	66
3.4.6	The equation of Denbigh.....	66
3.4.7	The equation of Scheffy and Johnson.....	66
3.4.8	The method of Sakiadis and Coates and the equation of Reid and Sherwood.....	67
3.4.9	The method of Sato and Riedel and the first equation of Reid, Prausnitz and Sherwood.....	68

3.4.10	The second equation of Reid, Prausnitz and Sherwood based on the works of Missenard and Riedel.....	68
3.4.11	The equation of Viswanath.....	68
3.5	Outlines about prediction formulae for thermal conductivity of mixtures.....	69
3.6	The method of Latini <i>et al.</i>	70
3.6.1	The first equation of Latini <i>et al.</i>	71
3.6.2	Liquids whose thermal conductivity increases with temperature.....	73
3.6.3	Dependence of the factor A on physical properties.....	80
3.6.4	Analysis of the thermal conductivity dependence on the pressure.....	82
3.6.5	Application to binary mixtures.....	83
3.6.6	New work on organic refrigerants.....	85
3.6.7	Latini's second equation for the thermal conductivity of organic refrigerants.....	86
3.6.8	Latini's third equation for the thermal conductivity of organic refrigerants.....	87
3.6.9	Application of Latini's third equation to other families of organic compounds.....	91
3.6.10	Further application of Latini's third equation to other organic compounds.....	91
3.6.11	Application to azeotropic and near-azeotropic refrigerant mixtures.....	91
	References.....	107

Chapter 4	Physical approach to the evaluation of the dynamic viscosity of liquids.....	115
4.1	Applications of statistical mechanics for the evaluation of the dynamic viscosity of liquids.....	118
4.1.1	The theory of Kirkwood.....	118
4.1.2	The time-correlation theory.....	119
4.1.3	The theory of Enskog.....	119
4.1.4	The theory of corresponding states.....	120
4.2	Applications of the activated state theory for the evaluation of the dynamic viscosity of liquids.....	121
4.2.1	The theory of Eyring.....	121
4.2.2	The first equation of Eyring.....	122
4.2.3	The second equation of Eyring.....	122
4.2.4	Other equations based on the activated state theory.....	123
4.3	Applications of the free volume theory for the evaluation of the dynamic viscosity of liquids.....	123
4.3.1	The theory of Batschinski.....	124

4.3.2	The equation of Doolittle.....	124
4.3.3	The equation of Barlow, Lamb and Matheson.....	124
4.3.4	The Hildebrand equation	124
4.4	Application of the combined free volume and activated state theories.....	125
4.4.1	The equation of Macedo and Litovitz.....	125
	References	125
Chapter 5	Estimation methods for the dynamic viscosity of liquids.....	129
5.1	The residual viscosity.....	130
5.2	Empirical equations to evaluate the dynamic viscosity of liquids.....	131
5.2.1	The Andrade equation.....	131
5.2.2	The equation of Vogel	132
5.2.3	The equation of Srinivasan and Krishna Murthy.....	132
5.3	Prediction methods based on group contribution	133
5.3.1	The equation of Orrick and Erbar	133
5.3.2	The equation of Thomas	134
5.3.3	The equation of Morris	135
5.3.4	The equation of van Velzen, Lopes Cardozo and Langenkamp	135
5.4	Equations based on the works of Batschinski	137
5.4.1	The equation of Przewdziecki and Sridhar	137
5.4.2	First Latini equation.....	138
5.5	Outlines on the prediction of the dynamic viscosity coefficient of mixtures	139
5.5.1	Simple mixing rules based on the molar fraction	140
5.5.2	Simple mixing rules based on the weight fraction.....	140
5.5.3	Simple mixing rules based on the volume fraction.....	141
5.5.4	A mixing rule for kinematic viscosity	141
5.6	Second Latini equation.....	142
5.6.1	New correlations for the evaluation of constants.....	143
5.6.2	Extension to other families of organic compounds.....	147
5.6.3	Application of Latini's method to refrigerant mixtures	149
5.6.4	Application to azeotropic and near-azeotropic mixtures	151
	References.....	157
Appendix	Experimental data tables for thermal conductivity and dynamic viscosity of organic liquids.....	163
A.1	Organic acids.....	165
A.2	Alcohols	167
A.3	Alkanes (paraffins).....	170

A.4 Aromatics	172
A.5 Methane series refrigerants	174
A.6 Ethane series refrigerants	176
Bibliography	181
Index	185
