Objectives of the Series

Advances in Management Information Series

Information and Communications Technologies have experienced considerable advances in the last few years. The task of managing and analysing ever-increasing amounts of data requires the development of more efficient tools to keep pace with this growth.

This series presents advances in the theory and applications of Management Information. It covers an interdisciplinary field, bringing together techniques from applied mathematics, machine learning, pattern recognition, data mining and data warehousing, as well as their applications to intelligence, knowledge management, marketing and social analysis. The majority of these applications are aimed at achieving a better understanding of the behaviour of people and organisations in order to enable decisions to be made in an informed manner. Each volume in the series covers a particular topic in detail.

The volumes cover the following fields:

Information
Information Retrieval
Intelligent Agents
Data Mining
Data Warehouse
Text Mining

Competitive Intelligence
Customer Relationship Management
Information Management
Knowledge Management

Contents

Preface	xv
Biography	xix
Part 1	
An introduction to e-learning systems, data mining and their interactions	1
Chapter 1	
Web-based educational hypermedia	3
<i>P. De Bra</i>	
1 Introduction	3
2 Adaptive (educational) hypermedia	5
3 The AHAM reference architecture	8
4 A general-purpose adaptive web-based platform	10
4.1 Overall architecture of AHA!	10
4.2 The AHA! authoring tools	13
5 Questions, quizzes and tasks	14
6 Adapting to learning styles	15
7 Conclusions	16
Chapter 2	
Web mining for self-directed e-learning	21
<i>P. Desikan, C. DeLong, K. Beemanapalli, A. Bose & J. Srivastava</i>	
1 Introduction	21
2 Why self-directed e-learning?	23
3 Web-based self-directed e-learning applications	24
3.1 Google Scholar	24
3.2 Westlaw	25
3.3 CiteSeer	25
3.4 LexisNexis	27
3.5 Knowledge management systems	27
3.6 Dr. Spock's child care	28

4	Gaps in existing technology	29
4.1	Lack of community collaboration.....	29
4.2	Time management	30
4.3	Not self-improving	30
4.4	Implicit relationships not mapped.....	30
5	Web mining	31
5.1	Web mining taxonomy	32
5.1.1	Web content mining.....	32
5.1.2	Web structure mining	32
5.1.3	Web usage mining	33
5.2	Web mining research: state of the art	33
5.3	Web mining applicable to e-learning.....	34
6	Future directions of research	35
6.1	Usage rules	35
6.2	Keyword clustering: the conceptual thesaurus	35
6.3	Recommendation mining.....	36
6.4	Smart results: model of relevance.....	36
6.5	Intelligent knowledge management systems	36
7	Conclusion.....	37

Chapter 3

Data mining for the analysis of content interaction in web-based learning and training systems.....	41
---	----

C. Pahl

1	Introduction	41
2	Interaction and behavior	43
2.1	Learning and training interaction.....	43
2.2	Implementing interaction.....	43
2.3	An abstract model of content interaction.....	44
2.4	The interactive database learning environment	44
3	Data and web usage mining.....	45
3.1	Web usage mining in the educational context	45
3.2	Data and web mining techniques	46
3.3	Education-specific web usage mining	47
4	Session statistics	48
5	Session classification	49
6	Behavioral patterns.....	50
7	Time series.....	52
8	Conclusions	53

Chapter 4

On using data mining for browsing log analysis in learning environments.....	57
--	----

F. Wang

1	Introduction	57
---	--------------------	----

2	Data mining	59
2.1	Association mining	59
2.2	Clustering	59
2.3	Web usage mining	60
3	Recommendation systems	60
3.1	Content-based filtering systems	60
3.2	Collaborative filtering systems	61
3.3	Recommendation systems based on association rules mining technologies	61
4	The research framework	62
5	Construction of browsing content structure	64
5.1	Data pre-processing	64
5.2	Model definition and construction	65
5.3	Model application	68
5.4	Summary statements	69
6	Personalized recommendation based on association mining	69
6.1	Model definition and construction	70
6.1.1	User browsing similarity in time-framed navigation sessions	71
6.1.2	The HBM clustering algorithm	71
6.1.3	Mining association rules	71
6.2	Model application	72
6.2.1	User classification	72
6.2.2	The window-sliding method	72
6.2.3	The maximal-matching method	73
6.3	Summary statements	73
7	Concluding remarks	73

Part 2

Case studies experiences of applying data mining techniques in e-learning systems	77
---	----

Chapter 5

Recommender systems for e-learning: towards non-intrusive web mining	79
--	----

O.R. Zaïane

1	Introduction	79
2	Collaborative filtering: how most systems work	81
3	Desired recommender systems in an online learning environment	82
4	Non-intrusive methods for recommendation	83
4.1	E-learning recommender with association rules	84
4.2	A model with clustering	85
5	Hybrid methods for recommendations	86
5.1	Architecture of a hybrid recommender system	86

5.2	User and visit session identification	87
5.3	Visit mission identification	87
5.4	Evaluating hybrid recommenders	90
6	Conclusion	93

Chapter 6

Active, context-dependent, data-centered techniques for e-learning: a case study of a research paper recommender system	97
--	----

T. Tang & G. McCalla

1	Introduction	98
2	A research paper recommender system	99
3	Two experiments in paper recommendation.....	102
3.1	What learners want: a survey.....	102
3.2	Evaluating pedagogy-oriented hybrid collaborative filtering	104
3.2.1	Simulation setup	104
3.2.2	Evaluation metrics and control variables.....	105
3.2.3	Experimental results and discussion.....	106
4	The ecological approach.....	107
5	Conclusion.....	111

Chapter 7

Applying web usage mining for the analysis of behavior in web-based learning environments.....	117
---	-----

K. Becker, M. Vanzin, C. Marquardt & D. Ruiz

1	Introduction	117
2	The process of WUM	119
2.1	Pre-processing phase	119
2.2	Data mining phase	120
2.3	Pattern analysis phase.....	120
2.4	Support environments.....	121
3	WUM challenges in practice: a case study.....	121
3.1	Pre-processing phase	122
3.2	Data mining phase	122
3.3	Pattern analysis phase.....	123
3.4	Lessons learned.....	124
3.4.1	Pre-processing issues.....	124
3.4.2	Pattern analysis issues.....	124
4	LogPrep: a customizable pre-processing tool.....	125
4.1	Configuration language and configuration template.....	126
4.2	Customization features	127
5	OR3: ontology-based rule rummaging and retrieval tool.....	127
5.1	Ontology representation	128
5.2	Conceptual pattern representation	129

5.3	Pattern rummaging.....	130
5.4	Pattern clustering.....	131
5.5	Pattern filtering.....	131
5.5.1	Filter definition.....	131
5.5.2	Equivalence filtering.....	132
5.5.3	Similarity filtering.....	132
6	Discussions.....	133
7	Conclusions and future work.....	135

Chapter 8

Association analysis for a web-based educational system.....	139
<i>B. Minaei-Bidgoli, P. Tan, G. Kortemeyer & W.F. Punch</i>	

1	Introduction.....	140
2	Background.....	142
2.1	Association analysis.....	142
2.2	Data mining for online education systems.....	143
2.3	Related work.....	143
3	Contrast rules.....	144
3.1	Example 1: cr_1 (difference of confidence).....	145
3.2	Example 2: cr_2 (difference of proportion).....	146
3.3	Example 3: cr_3 (correlation and chi-square).....	147
3.4	Contrast rules and interestingness measures.....	147
4	Algorithm.....	148
5	Experiments.....	149
5.1	Data model and attributes.....	149
5.2	Data sets.....	151
5.3	Results.....	152
5.3.1	Difference of confidences.....	152
5.3.2	Difference of proportions.....	153
5.3.3	Chi-square.....	154
6	Conclusion.....	154

Chapter 9

Data mining in personalizing distance education courses.....	157
<i>W. Hämmäläinen, T.H. Laine & E. Sutinen</i>	

1	Introduction.....	157
2	General paradigms for ITSS.....	158
3	Data description.....	160
4	Correlations and Linear Regression Models.....	162
5	Association rules and probabilistic models.....	164
6	Evaluating the predictive power by cross-validation.....	167
7	Conclusions.....	169

Chapter 10

Rule mining with GBGP to improve web-based adaptive educational systems.....	173
<i>C. Romero, S. Ventura, C. Hervás & P. González</i>	
1 Introduction	173
2 Data mining in e-learning systems	174
3 Students' usage data	176
4 Knowledge discovery process	178
4.1 Rule discovery with GBGP	179
5 EPRules tool	181
6 Experimental results	184
6.1 Description of the discovered information	185
7 Conclusions and future work.....	186

Chapter 11

Identifying gifted students and their learning paths using data mining techniques	191
<i>S. Bae, S.H. Ha & S.C. Park</i>	
1 Introduction	191
2 Data mining in education.....	192
2.1 Gifted education: a short review.....	192
2.2 Web mining	193
3 Identification of gifted students using neural network and data mining.....	193
3.1 Design of questionnaire.....	194
3.2 Clustering and classification of gifted students	195
3.3 Creating a giftedness quotient using neural networks	195
3.4 Applications.....	196
3.4.1 General and specific test: identifying of giftedness and their type.....	197
3.4.2 Evaluating the results of the identification test.....	199
4 Web mining for extracting learning path.....	199
4.1 Customized education.....	201
4.2 Virtual knowledge structure	203
4.3 Application of web mining to a web-based education system.....	203
5 Conclusions	205

Chapter 12

Data mining to support tutoring in virtual learning communities: experiences and challenges	207
<i>E. Gaudioso & L. Talavera</i>	
1 Introduction	207
2 Data mining	208

3	Defining data mining tasks for supporting tutoring.....	210
3.1	A working problem.....	212
4	Data pre-processing.....	212
5	Building predictive models.....	215
5.1	Supporting tutors in course assessment.....	216
5.2	Supporting tutors in anticipating student activity levels.....	219
6	Building descriptive models.....	220
6.1	Supporting tutors in determining behavioral patterns.....	220
6.2	Supporting tutors in course assessment.....	222
7	Challenges and lessons learned.....	223
7.1	Definition of data mining tasks.....	223
7.2	Data preparation.....	223
7.3	Model building.....	224
8	Concluding remarks.....	225

Chapter 13

Analysis of user navigational behavior for e-learning personalization.....		227
<i>E. Mor, J. Minguillón & J.M. Carbó</i>		

1	Introduction.....	227
2	E-learning environments.....	230
2.1	The UOC virtual campus.....	231
2.2	Virtual campus architecture and services.....	232
3	Navigational behavior analysis.....	233
3.1	Navigational levels.....	234
4	Experimental results.....	235
4.1	Server log files.....	236
4.2	Data pre-processing and feature extraction.....	238
4.3	Web mining.....	241
4.3.1	Variable relevance.....	241
4.3.2	Unsupervised clustering.....	242
4.4	Data fusion.....	243
5	Conclusions.....	243

Chapter 14

Automatically constructing an e-textbook via web mining.....		247
<i>J. Chen & Q. Li</i>		

1	Introduction.....	247
2	System architecture.....	248
3	Building concept hierarchies.....	250
4	Topic content identification.....	251
4.1	Segmenting web pages.....	251
4.2	Identifying the topic content for topic pages.....	252
5	Ranking algorithm.....	253
5.1	Original rank.....	254

5.2	Cue phrases.....	254
5.3	Weighty tags.....	254
5.4	Concept descriptions and definitions.....	255
5.4.1	Pattern set mining.....	255
5.4.2	Concept discovery.....	258
5.5	Integrating extracted features.....	259
6	Conclusions.....	259

Chapter 15

Online outlier detection of learners' irregular learning processes.....		261
<i>M. Ueno</i>		
1	Introduction.....	261
2	Learning management system 'Samurai'.....	263
3	Online outlier detection.....	264
3.1	Data.....	264
3.2	Model.....	265
3.3	Model.....	266
3.4	Outlier detection curves and examples.....	266
4	Simulation experiments.....	267
5	System.....	269
6	Evaluation.....	270
7	Animated agent to enhance learning.....	272
8	Conclusions.....	274

Chapter 16

Use of data mining to examine an outreach call center's effectiveness and build a predictive model for classifying future marketing targets.....		279
<i>J. Luan, C. Summa & M. Wieland</i>		
1	Background.....	279
2	Three key questions addressed.....	281
3	Data sources.....	281
4	Design and method.....	282
5	Findings.....	283
5.1	Yield.....	283
5.1.1	Step one for answering question one: overall effect of the presence of call center.....	283
5.1.2	Step two for answering question one: computing specific yield rates.....	284
5.2	Predictive modeling.....	285
5.2.1	Data mining rationale and discoveries.....	291
6	Discussion.....	296

Preface

The design and implementation of web-based education systems have grown exponentially in the last years, spurred by the fact that neither students nor teachers are bound to a specific location and that this form of computer-based education is virtually independent of any specific hardware platforms. These systems accumulate a vast amount of information which is very valuable in analyzing students' behavior and to assist authors in detecting possible errors, shortcomings and improvements. However, due to the vast quantities of data these systems can generate daily, it is very difficult to manage manually, and authors demand tools which assist them in this task, preferably on a continuous basis. A very promising area to attain this objective is the use of data mining.

In the last years, researchers have begun to investigate various data mining methods to help teachers improve e-learning systems. These methods allow them to discover new knowledge based on students' usage data. The same idea has already been successfully applied in e-commerce systems and is now very popular. Comparatively little work in this direction has yet been released in e-learning systems. However, the number of contributions in this area have grown, both in international conferences (International Conference on Computers in Education, International Conference on Web-based Learning, World Conference on Open Learning and Distance Education, International Conference on Adaptive Hypermedia and Adaptive Web-based Systems, International Conference on User Modeling, International Conference on Intelligent Tutoring Systems, Pacific-Asia Conference on Knowledge Discovery and Data Mining, Genetic and Evolutionary Computation Conference, etc.) and in scientific journals (International Journal on E-Learning, IEEE Education, Computers & Education, Journal of Educational Technology Systems, Journal of Interactive Learning Research, User Modeling and User-Adapted Interaction, etc.). The main purpose of this book is to show the current state of this research area.

This book consists of openly solicited and invited chapters, written by international researchers and leading experts on the application of data mining techniques in e-learning systems. The book consists of 16 chapters organized in two parts. In the first part of the book (Chapters 1–4) we present an introduction to e-learning systems, data mining and the interaction between the two areas. In the

second part of the book (Chapters 5–16) we present several case studies and experiences of applying data mining techniques in e-learning systems. In particular, the chapters cover the following:

Chapter 1 describes recent and ongoing research in web-based education systems, in particular adaptive web-based educational hypermedia.

Chapter 2 describes specific examples of self-directed e-learning and how their functionality and utility can be improved through the use of web mining technology.

Chapter 3 proposes the use of web usage mining for the analysis and evaluation of learner interactions with contents in web-based learning and training systems.

Chapter 4 describes some models and methods of analyzing browsing log data to construct a browsing behavioral model which is helpful in supporting e-learning applications.

Chapter 5 suggests the use of web mining techniques as non-intrusive method to build an agent that could recommend actions, resources or simply links to follow, in a e-learning environment.

Chapter 6 proposes an e-learning system that recommends research papers to students wishing to study an area of research.

Chapter 7 describes a case study and an extensible and customizable pre-processing and pattern analysis tools for supporting the web usage mining process.

Chapter 8 introduces an approach for predicting student performance by the discovery of interesting contrast rules within a web-based educational system.

Chapter 9 introduces general paradigms for tackling intelligent tutoring systems and applies various data mining schemes to describe and predict student performance.

Chapter 10 proposes the use of evolutionary algorithms as an association rule mining method for discovering interesting relationships in student's usage data.

Chapter 11 proposes a neural network model for identification of gifted students and a web mining framework for distance education to provide their learning path.

Chapter 12 reviews some experiences using data mining to analyze data obtained from e-learning courses based on virtual communities.

Chapter 13 describes a framework for studying the navigational behavior of the users in an e-learning environment integrated in a virtual campus to include the concept of recommended itinerary.

Chapter 14 proposes the construction of an e-textbook automatically using data mining methodologies for a user-specified topic hierarchy and examines how web content mining can be applied to aid e-learning experiences.

Chapter 15 proposes a method of online outlier detection of learners' irregular learning processes using their response time to e-learning content.

Finally, Chapter 16 proposes the use of data mining in enrollment management.

In conclusion, we hope the reader will find this book a truly helpful guide and a valuable source of information about the application of data mining techniques in e-learning systems.

Cristóbal Romero & Sebastián Ventura

Córdoba, July 2005

Biography

Dr. Cristóbal Romero is an Assistant Professor in the Computer Science Department of the University of Córdoba, Spain. He received his Ph.D. in Computer Science from the University of Granada in 2003. His research interests lie in artificial intelligence and data mining in education.

Dr. Sebastián Ventura is an Associate Professor in the Computer Science Department of the University of Córdoba, Spain. He received his Ph.D. in Sciences from the University of Córdoba in 1996. His research interests lie in soft-computing and its applications.
