Preface

During the two years since the initial Internet and Society Conference in 2004 there has been a continued growth of Internet-based technologies and an increased emergence of mobile and wireless high-speed access that allows these technologies to be accessible at anytime and in nearly any place. This development dramatically affects the ways in which we work, learn, communicate, play and even govern our society. The constant availability of information and communication changes our views of ourselves and the social rules that govern our world. We no longer have clear demarcations between work and home or between school and recreation.

The 2006 Internet and Society conference allowed academics, researchers, developers and policy makers to inform and be informed about the latest developments associated with these diverse issues which are united by common technologies and common challenges associated with the themes of Identity (establishing the identity of digital actors within virtual environments), Ownership (establishing the intellectual origin of digital materials) and Truth (establishing the accuracy or validity of digital information). Interdependencies among these three themes as well as issues pertaining to multiple identities, shared ownership and alternative accounts of truth are part of the information revolution facilitated by the Internet.

These key issues and their current state of the art are reflected within this book, which contains contributions from all over world covering the whole range of social and human perspectives associated with these new and emerging communications and information technologies. This book will, therefore, be of value both to newcomers to this area and also to established authorities as a summary of the current state of this important and growing domain.

The Editors
New Forest, 2006
## Contents

### Section 1: New learning

Complexity, challenge and creation in curriculum design  
*S. Mecca & J. Thompson* ................................................................. 3

An innovative media arts curriculum for lower elementary school (kindergarten through second grade), which integrates technology seamlessly into the classroom curriculum  
*S. Nuss* .......................................................................................... 13

The impact of Information Technology (IT) use on children’s cognitive, social, psychological and moral development  
*L. A. Jackson, Y. Zhao, H. E. Fitzgerald, A. von Eye & R. Harold* ............... 23

Designing markets for learning: a virtual trading room approach  
*J. R. O’Brien* .................................................................................. 33

A practical IP telephony application framework to conduct online surveys among University City students in China  
*J. Zhu & E. Gide* .............................................................................. 41

Mobile learning and initial teacher education  
*R. Wood* ............................................................................................ 51

Virtual collaboration tools used in project management learning: case study in the Amazon Forest area  
*A. C. Stanger & A. F. de Abreu* .......................................................... 61

On the application of ICT in learning English as a second language: IWiLL  
*C.-H. Kuo, D. Wible, M. C. Chen, H.-Y. Huang & S. Kuo* .......................... 71

A training model to develop design skills in the virtual design studio  
*F. Olmos* ............................................................................................ 81
Section 2: Psychology

Internet addiction: where we are now
J. Morahan-Martin.................................................................93

Give the girls a chance: should spatial skills training be incorporated into the curriculum?
S. Jones & G. Burnett.............................................................105

The world of work beneath the veil
A. Rhodes & N. Edge ...............................................................115

Digital access and human development
A. Simsek ................................................................................127

A cross-cultural study of icons and images used in North American web design
E. Knight, C. Gunawardena, F. Bouachrine, N. Dassanayake,
T. Gnanakumar & C. Kulasuriya...........................................135

Understanding internet use and dependency
Ch.-H. Soh & R Murali ............................................................145

Cyberbullying: a worldwide trend of misusing technology to harass others
E. Kraft...................................................................................155

How human is your computer? Measuring ethopoeic perceptions of computers
J. P. Charlton ...........................................................................167

The guru and the wizard: psychological issues in the development and use of intelligent interfaces
A. A. Bamitale ...........................................................................177

Section 3: E-culture

Analysis of the digital divide of information literacy for rural-urban in Taiwan
H. S. Chang & K. W. Tsou .......................................................191

Information and Internet change society: emerging constitution of the social systems
A. Rosický & A. Pavliček ..........................................................201
Of virtual groups and their way of communicating
A. I. Teleoacă ........................................................................................................215

Communities of practice environment
J. Feldman, D. Lee & D. Thaw .............................................................................225

We like… cultural traits in cybertculture
G. Fletcher & A. Greenhill ...............................................................................235

Section 4: E-governance

E-democracy and citizen’s empowerment: a case study of the city of Madrid
J. M. V. Santos & A. I. Alonso .............................................................................247

Opportunity and overview of SMS-based e-government in developing countries
T. D. Susanto & R. Goodwin .............................................................................255

E-governance in revenue collection and administration
T. M. Nisar ........................................................................................................265

The self-organization of cyberprotest
C. Fuchs ...........................................................................................................275

Contesting Internet governance: global dissent and disparities in the management of cyberspace resources
D. Drissel .........................................................................................................297

Section 5: E-commerce

Persuasive e-commerce website design assistant tool
Idyawati H., E. A. Seman & Y. Yusak .............................................................313

Analysis of Information and Communications Technology (ICT) for the Internet-based business
B. G. Lee & Y. H. Lee ........................................................................................323

Towards the generation of mobile device markup from web pages
W. Chang & R. Kelly ...........................................................................................333

A framework for e-commerce: its evaluation
A. Zailani & M. Yazid .....................................................................................343
The impact of e-commerce on transport
S. Basbas ...........................................................................................................353

A GIS web-based traffic accident information system
K. Evangelidis, S. Basbas & P. Papaioannou...................................................363

Self-organising web portal with evolutionary links panel
T. Filatov & V. Popov .......................................................................................373

Web: computing tool, business tool – Malaga firms in a case study
V. Fernández & S. Millán ..................................................................................383

Derivation of initial data warehouse structure by mapping
operational database on transaction patterns
A. Khalfe & S. I. Hyder ....................................................................................393

Online consumer response: key variables affecting consumers’
value perceptions
O. Discombe ......................................................................................................403

Section 6: Data and information privacy

A French-Australian comparison of attitudes towards security and
privacy in modern information technologies
L. M. Batten & G. LeGrand ..............................................................................415

Schemes for secure management of digitally produced documents
D. Gligoroski, S. J. Knapskog & S. Andova......................................................425

Semantic Web: a personal privacy perspective
S. Atkinson, P. Jagodzinski, C. Johnson & A. Phippen....................................435

Privacy issues of using cashless mediums of exchange over the internet
A. M. Young.......................................................................................................443

Author index ....................................................................................................449
