Preface

This Volume of the Transactions of Wessex Institute contains the edited proceedings of the 1st International Conference on Energy and Sustainability that was held at the Wessex Institute of Technology in June 2007. The conference offered an opportunity for professionals from the energy sector and industrial sector as well as governmental and non-governmental organizations and other interested parties to be involved in discussions on key issues and challenges in energy and sustainability and to exchange experiences and views on the current technologies and strategies applied in different parts of the world.

Sustainable energy production is one of the key issues of the modern society and requires new ideas to advance the technologies and strategies currently in use. The main fields, which are the focus of many research efforts, are: renewable energy sources, energy storage, energy transportation, energy efficiency, energy and sustainability, etc. These and other aspects were the focus of the presentations and discussions carried out at the conference.

The proceedings of the conference address a wide range of the current waste management issues, which are conveniently arranged in the following sections:

- Energy resources management
- Energy efficiency
- Energy and life cycle analysis
- Energy and the environment
- Energy and built environment
- Renewable energy technologies
- Computer modelling
- Nuclear fuels
- Hydrocarbon exploration and recovery
- Energy markets and policy

The Editors would like to thank the members of the International Scientific Advisory Committee for their assistance in promoting the Meeting and review of abstracts and follow-up papers that are contained in this book. Their work has ensured high quality standards for the conference and this volume. Finally, the authors are to be commended for their excellent contributions, which advance the sustainable energy strategies.

The Editors
New Forest, 2007
Contents

Section 1: Energy resources

Transport demand management and energy consumption in urban areas
S. Basbas ......................................................................................................................3

Management of electricity generation using the Taguchi approach
M. Jamil, V. Popov, S. Ahmed & Z. A. Khan .........................................................13

Micro cogeneration with a price-variable heat storage switch
G. Kaestle..................................................................................................................25

Clean energy saving: applied research into Etna’s water supply systems in Catania, Italy
F. Patania, A. Gagliano, F. Nocera & I. Pellegrino..............................................35

The UK Energy Research Centre Meeting Place: a transferable model for international energy research collaboration and networking?
S. Keay-Bright........................................................................................................43

Relationship between electric demand and CDD and the forecast of daily peak electric load in Beijing
D. P. Ding, Z. Xie, X. Li, H. L. You & C. Han.......................................................55

An optimization of effective energy management as a tool to facilitate managers
B. Geethanjali, L. M. Hansa & M. Daniel...............................................................61

Section 2: Energy efficiency

Elastic heat exchanger in Stirling cycle machines
Y. Kobayashi, M. Matsuo, N. Isshiki & W. Ishida...............................................73
Advantages of foam flow usage for heat transfer process
J. Gylys, S. Sinkunas, S. Ziedelis & T. Zdankus.................................................. 83

Identifying and capturing energy savings in an integral motor-drive system
M. Ektesabi & H. Felic ....................................................................................... 93

Synergy between exergy and regional planning
L. Gommans & A. van den Dobbelsteen ........................................................... 103

Efficiency improvement of the hot blast generating system by waste heat recovery
Pei-Hsun Lin, Pai-Hsiang Wang, Hui-Tien Chen & Wei-Lun Chung .............. 113

Applying the Path Analysis Method to determine the significance of input parameters on the output of Derbendikhan power station
R. A. Saeed, M. M. Faqee & F. M. Khoshnaw.................................................. 123

Section 3: Energy and life cycle analysis

Life cycle impact assessment of the DRAM chip industry in Taiwan
C. H. Liu, S. J. Lin & C. Lewis........................................................................... 135

Energy-using products as embodying heterogeneous requirements
G. Wallenborn, N. Prignot, K. Thollier, C. Rousseau & A. Van Cutsem........... 145

Life-cycle energy analysis of wind turbines – an assessment of the effect of size on energy yield
R. H. Crawford.................................................................................................. 155

The use of the life cycle assessment (LCA) conception for Mittal Steel Poland SA energy generation – Krakow plant case study
B. Bieda............................................................................................................. 165

Section 4: Energy and the environment

High temperature stability of n-decanethiol by adsorption on nickel powders used as reforming catalysts in solid oxide fuel cells (SOFC)
H. Oudghiri-Hassani, N. Abatzoglou, S. Rakass & P. Rowntree...................... 177

Comparing renewable energies: estimating area requirement for biodiesel and photovoltaic solar energy
M. Bravi, F. Coppola, F. Ciampalini & F. M. Pulselli..................................... 187
Comparison of energy performance between passenger cars and motorcycles in Taiwan by decomposition analysis
I. J. Lu, S. J. Lin & C. Lewis ................................................................. 197

Barriers to energy crops in Poland – from the farmers’ perspective

The energy industry and environmental challenges
P. S. Maharaj & K. Ramnath ................................................................. 217

Decoupling effects among energy use, economic growth and CO₂ emission from the transportation sector
S. J. Lin, P. Rogers & I. J. Lu ........................................................................... 227

Existing power generation and network facilities improvement against seismic damage
K. Fallahi ........................................................................................................ 237

Estonian oil shale power plants’ ash handling problems
H. Arro, J. Loosaar, T. Pihu & A. Prikk ........................................................ 247

Section 5: Energy and built environment

Energy saving analysis of double roofs incorporating a radiant barrier system
H.-H. Wu & C.-M. Lai ...................................................................................... 259

Waste equals energy: decentralised anaerobic waste treatment and local reuse of return flows
A. van Timmeren ............................................................................................ 267

Towards large-scale implementation of cogeneration for a more sustainable energy supply of households in The Netherlands
G. de Werk & L. M. Kamp ................................................................................ 277

Building skin and energy efficiency in a hot climate with particular reference to Dubai, UAE
M. A. Haggag ................................................................................................... 287

Embodied transport energy analysis of imported wood pellets
A. Duffy & M. Conroy ..................................................................................... 299
Section 6: Renewable energy technologies

Ground temperature gradients surrounding horizontal heat pump collectors in a maritime climate region
*M. Greene, N. Burke, J. Lohan & R. Clarke* .......................................................... 309

Motivating student interest in sustainable engineering and alternative energy research through problem based learning
*C. D. Kestell* ....................................................................................................... 321

Section 7: Computer modelling

Study on optimal operational planning of an advanced co-generation system on a hotel’s energy demand
*M. Tomizawa, Y. Amano & T. Hashizume* ........................................................ 333

The role of numerical modelling in development of new refrigeration systems and equipment
*B. Pavković* ........................................................................................................ 343

Section 8: Nuclear fuels

Innovative oxide fuels doped with minor actinides for use in fast reactors

Some aspects of simplified modeling of tokamak plasmas in a computational electromagnetic environment
*J. Sakellaris* ....................................................................................................... 367

Section 9: Hydrocarbon exploration and recovery

A physical basis for Hubbert’s decline from the midpoint empirical model of oil production
*R. J. Wiener & D. M. Abrams* ........................................................................... 377

Correlation development for the viscosity reducing effect of solvent in an enhanced oil recovery (EOR) process
*S. Snow, L. D’Orsay & A. Miadonye* ............................................................. 385
Section 10: Energy markets and policy

Using the Triptych model for future burden sharing – a case study for Flanders
K. Claes & I. Moorkens ....................................................................................397

A GIS-based decision support system for facilitating the investment on exploiting local wind energy sources
C.-D. Yue & T.-Y. Chao ....................................................................................407

The European gas market: the effects of liberalization on retail prices
G. Capece, F. Di Pillo, M. Gastaldi & N. Levialdi...........................................417

Power plants on the liberalized Croatian electricity market and environmental protection
I. Androcec & T. Tarnik ....................................................................................427

Author Index ...................................................................................................437
