Preface

Engineering materials are subjected to fatigue loading in a wide variety of applications in aeronautical, automotive, nuclear plant, petroleum and transportation industries. The extensive use of engineering materials over such a range of applications plus the cost involved in fatigue failure of materials and structures has resulted in an increasing awareness of the importance of damage and durability under cyclic loading conditions. It has recently been estimated that the annual cost of premature failures due to fatigue is well over 100 billion dollars per year.

The First International Conference on Fatigue Damage of Materials (FDM) held in Toronto, Canada (July 14-16, 2003) aimed to bring together both fatigue researchers and engineers to review and discuss the recent advances in the development of methods and approaches to predict fatigue performance of materials and structures. The conference focused on the state-of-the-art in fatigue testing and analysis methods; analytical and numerical criteria for crack growth rate, crack closure, fatigue damage and failure mechanisms, life prediction and design of engineering components subjected to fatigue loading and other related topics. Coverage was broad and included a range of materials and structures as well as different viewpoints and approaches to the fatigue analysis problem. Contemporary fatigue crack initiation and fatigue crack propagation methodologies were discussed, and problems in the areas of crack closure, loading spectrum, thermo-mechanical fatigue and creep, and multiaxial loading from both analytical and experimental point of views have been addressed. The present book contains papers, which were peer-reviewed and accepted for presentation at the conference and for inclusion in this book. This book includes 45 papers presented in eleven different sections of:

- Case studies on fatigue
- Computational methods
- Low cycle fatigue
- Fatigue crack initiation
- Fatigue crack propagation
- Fatigue damage analysis
- Fatigue of welded joints
- Multiaxial fatigue
- Small crack growth and threshold
- Statistical analysis of fatigue
- Thermo-mechanical fatigue and creep
The Conference was organized by the WIT, Southampton, U.K., in collaboration with Ryerson University, Toronto, Canada. The editors of this book are indebted to all authors for their excellent contributions and thankful to the Members of the International Scientific Advisory Committee who promoted the conference and helped in reviewing the papers submitted to this conference. Especial thanks go to Miss Amy D’Arcy-Burt who coordinated much of the activities related to the review process of the papers.

A. Varvani-Farahani and C. A. Brebbia,
Editors 2003
Contents

Section 1: Case studies on fatigue

Fatigue properties of vibration welded nylon 6 and nylon 6,6 butt joints
K. Y. Tsang, D. L. DuQuesnay & P. J. Bates ....................................................... 3

Cutting process influence on fatigue steel sheets properties
E. Maronne, A. Galtier, J.-L. Robert & T. Ishikawa ........................................... 13

CF-18 wing full-scale fatigue testing and structural certification
A. Dabayeh, C. Yeung & P. Londei ................................................................. 23

Effect of the coefficient of friction on the fatigue life of splines
C. H. H. Ratsimba, S. B. Leen, I. R. McColl & E. J. Williams ......................... 35

Fracture surface study of spur gears subjected to service loading history
C. R. Cvetnic, A. Varvani-Farahani & C. Ravindran ....................................... 45

Fatigue characteristics of aluminum cast alloy AC2B-T6 with cast skin
S. Ohama, T. Yoshimura & H. Noguchi .......................................................... 55

Fatigue life of asphalt concrete with rubber grains
A. D’Andrea & N. Fiore ................................................................................... 65

Section 2: Computational methods

Strain field and strain history of nonproportional loading
H. Jahed and M. Reza Noban ........................................................................... 77

Fatigue crack propagation analysis with the adaptive finite element mesh generator
I. Kovše ............................................................................................................. 89

Calculation of the stress intensity factor variation due to residual stress following an overload
Ph. Darcis, J. Li & N. Recho .............................................................................. 99
Section 3: Low cycle fatigue

Estimation of the low cycle fatigue life for a submarine pressure hull
C.-C. Liang, C.-Y. Hsu, T.-L. Teng & C.-Y. Jen ........................................... 113

Effect of residual stress on the fatigue life resistance of Ni-base materials operating under high applied loads
M. Belassel, M. Brauss, S. G. Berkley & J. Pineault ......................................... 125

Influence of strain rate on tensile and LCF properties of prior cold worked 316L stainless steel in dynamic strain aging regime
S.-G. Hong & S.-B. Lee..................................................................................... 137

Mathematical model for modelling the cyclic hardening/softening transient response of metallic materials
H. Nie.................................................................................................................. 149

Nondestructive fatigue damage assessment for Ti-6Al-4V alloy
J. K. Na, J. Frouin & S. Sathish........................................................................ 159

Section 4: Fatigue crack initiation

On the mechanism and causes of cross cracking in concast low alloy manganese steel slab
J. Dobrovska, V. Dobrovska, K. Stransky, F. Kavicka, J. Stetina, B. Velicka & J. Heger ...................................................................................... 171

Fatigue properties of high performance steel
H. Chen, G. Y. Grondin & R. G. Drive ................................................................ 181

AFM study of slip localization and surface relief evolution in fatigued ferritic X10CrAl24 stainless steel
J. Man, J. Polák, M. Vičar, K. Obrtlík, J. Matějková & A. Rekl............................. 193

Analysis of the effect of $K_{max}$ on the fatigue crack propagation threshold
J. Zhang, J. Z. Zhang & S. Y. Du ........................................................................ 205

Section 5: Fatigue crack propagation

Fatigue crack growth behaviour of surface cracks in Glare
R. C. Alderliesten & J. J. Homan .................................................................... 213

Numerical simulation of crack bifurcation under fatigue loading
X.-B. Zhang, N. Recho, S. Ma & J. Li ................................................................. 223
Section 6: Fatigue damage analysis

Analysis of heat sources induced by fatigue loading
T. Boulanger, A. Chrysochoos, C. Mabru & A. Galtier........................... 255

Corrosion-fatigue behaviour of an HSLA steel subjected to periodic overloads
D. L. DuQuesnay, R. M. Chlistovsky & P. J. Heffernan ......................... 263

The influence of drilling parameters and hole damage on GFRP composites fatigue strength
A. Paoletti ....................................................................................... 273

Evaluation of fatigue damage in SiC particulate reinforced aluminum alloy by X-ray
Y. Akiniwa & K. Tanaka ................................................................. 283

A fundamental study on deterioration of the existing RC beam by chemical and mechanical damage
Y. Sonoda, N. Murato & H. Hikosaka............................................. 295

Section 7: Fatigue of welded joints

Fatigue damage analysis of welded structures based on continuum damage mechanics
K. Thepvongsa, Y. Sonoda & H. Hikosaka ......................................... 309

Influence of welding parameters on fatigue strength of spot-welded joint considering nugget size
T. Chaya, T. Yoshimura & H. Noguchi ............................................ 321

Section 8: Multiaxial fatigue

Crack closure, crack growth rate and fatigue life changes due to compressive overloads in biaxial fatigue
T. H. Topper and A. Varvani-Farahani ............................................ 335
Further evaluation of the advanced prediction method EVICD for arbitrary multiaxial loading
C. Baum, W. Ott, A. Buczynski, K.-H. Trautmann & H. Nowack ..................... 345

Empirical relationship between pulsating and fully reversed fatigue strength amplitudes

Fatigue life estimation under multiaxial loading based on the spectral analysis of stochastic processes
T. Łagoda, E. Macha & A. Niesłony ................................................................. 367

Section 9: Small crack growth and threshold

Threshold stress for short fatigue crack growth
A. Plumtree, N. Untermann & J. Petermann .................................................. 381

Microcracking response of CFRP composites at different temperatures
H. Haftchenari and A. Varvani-Farahani ......................................................... 389

Simulation of stage I fatigue crack growth in a polycrystal through coupled FEM and discrete dislocation dynamics
G. Bertolino, V. Doquet & M. Sauzay .............................................................. 399

Simulation of microcrack growth under multiaxial random loading and comparison with experimental results
A. Ahmadi & H. Zenner ...................................................................................... 409

Fatigue crack initiation and propagation behaviour of a squeeze cast Al alloy and its statistical aspect
M. Goto, T. Yamamoto, H. Nisitani & N. Kawagoishi ........................................ 421

Section 10: Statistical analysis of fatigue

Statistical models for prediction of the fatigue crack growth in aircraft service
N. A. Nechval, K. N. Nechval & E. K. Vasermanis ........................................... 435

Staircase testing - confidence and reliability
B. R. Rabb ......................................................................................................... 447

Probabilistic approach in high cycle multiaxial fatigue: volume and surface effect
L. Flacelière & F. Morel ...................................................................................... 465
Section 11: Thermo-mechanical fatigue and creep

Fatigue strength of ODSC at elevated temperature
N. Kawagoishi, H. Nisitani & M. Goto ................................................................. 479

Thermal fatigue life estimation based on CASE failure criterion with measured solder layer strain
R. Das & H. Lu ........................................................................................................ 489

Experimental evaluation on fatigue-creep interaction
J. L. Pacheco .................................................................................................... 499

Author Index ............................................................................................................. 509
