A new book series of original Chinese titles translated into English for the first time

CHINESE SCIENCE TODAY, a collaboration between Science Press Ltd. and WIT Press, makes available in English seminal works originally published in Chinese that will be of interest to the global scientific and technical community. Science Press Ltd., of Beijing China, known both as the “publishing house for scientists” and “cradle of academicians”, and WIT Press, with its motto “...for Scientists by Scientists”, share a common publishing ethic that both enhances and ensures the success of this on-going strategic cooperative relationship.
Many researchers from various scientific disciplines use wavelets, but as often as not they fail to understand the fundamental concepts of wavelet analysis and why wavelets can be used both to solve and to treat problems. Fundamentals of Wavelets is designed to meet the needs of the above-mentioned researchers and to demonstrate that wavelets are not only the microscopes and telescopes in mathematics but that it is also not necessary to have a detailed theoretical knowledge to use them to solve problems.

Author: Di Jizheng, Zhejiang University of Technology, China
ISBN: 978-1-84564-642-4
eISBN: 978-1-84564-643-1
Pages: 274
Published: 2012
Price: $258.00

The origins of evolutionary computation can be traced back to the late 1950’s where it remained, almost unknown, to the broader scientific community for three decades until the 1980’s when it started to receive significant attention, as did the study of multi-agent systems (MAS). This focuses on systems in which many intelligent agents interact with each other. Today these systems are not simply a research topic but are also beginning to become an important subject of academic teaching and industrial and commercial application. Coevolutionary Computation & Multiagent Systems introduces the author’s recent work in these two new and important branches of artificial intelligence.

Authors: Licheng Jiao, Jing Liu, Weicai Zhong, Xidian University, China
ISBN: 978-1-84564-638-7
eISBN: 978-1-84564-639-4
Pages: 270
Published: 2012
Price: $258.00
Environmental Innovation in China

China has both the capacity and the need to become a global leader in sustainable development and innovation in environmental technology. Environmental Innovation in China acknowledges many of the mistakes that have been made in the past where economic development has resulted in pollution to land, air and water but more importantly it presents a blueprint for the future with the recommendation that a National Environmental Innovation Action Plan is established.

Mechanics of Granular Matter

Focussing on the basic mechanics and underlying physics of granular material, Mechanics of Granular Matter starts with an introduction to contact mechanics of individual particles before moving on to a discussion of the structure of force chain networks and the influence on bulk mechanical properties of granular solids and granular flows. Furthermore, a preliminary multi scale framework is proposed for the nonlinear mechanics and strain localization in granular materials.

| Authors: | Qicheng Sun and Guangqian Wang, Tsinghua University, China |
